**Subject: Board Order R7-2006-0008**  
**PG&E Topock Compressor Station, Needles, California**  
**Floodplain Reductive Zone In Situ Pilot Test**  
**March 2006 Monitoring Report**

Dear Mr. Perdue:

Enclosed is the Board Order R7-2006-0008 March 2006 Monitoring Report for the Pacific Gas and Electric Company (PG&E) Topock Compressor Station, floodplain reductive zone in situ pilot test. This report is being submitted in compliance with the Waste Discharge Requirements (WDRs) issued by the Colorado River Basin Regional Water Quality Control Board (Water Board) under Board Order R7-2006-0008. WDRs under Board Order R7-2006-0008 apply to the floodplain reductive zone in situ pilot test only.

If you have any questions regarding this report, please call me at (805) 546-5243.

Sincerely,

Yvonne Meeks  
Topock Project Manager

Enclosures:

Board Order R7-2006-0008 March 2006 Monitoring Report for the Floodplain Reductive Zone In Situ Pilot Test.

## **1. Introduction**

Pacific Gas and Electric (PG&E) is implementing a floodplain reductive zone in-situ pilot test (ISPT) to address chromium concentrations in groundwater at the Topock Compressor Station near Needles, California. The purpose of the floodplain ISPT is to evaluate the efficacy of using a food-grade reagent mixture to reduce hexavalent chromium in groundwater to form stable, insoluble trivalent chromium. The floodplain ISPT consists of injecting the reagent mixture into a well cluster (PTI-1S/M/D) and monitoring the results in six three-level well nests (PT-1 through PT-6). Figure 1 provides a map of the PG&E Topock Compressor Station and ISPT area. (All figures are provided at the end of the report).

California Regional Water Quality Control Board, Colorado River Basin Region (RWQCB) Order No. R7-2006-0008 authorizes PG&E to inject 6,000 gallons of blended groundwater and reagent mixture into the shallow, middle and deep depths of injection well cluster (PTI-1S/M/D) located in the Colorado River floodplain. Injection of the reagent mixture may occur one to four times during a six-month period.

The Monitoring and Reporting Program (MRP) under Order No. R7-2006-0008 requires monthly monitoring reports to be submitted by the 15<sup>th</sup> day of the following month. The MRP also requires quarterly reports to be submitted by the 15th day of the month following the end of each calendar quarter. This report describes monitoring activities related to the floodplain ISPT for March 2006 and the first quarter 2006, including those associated with the installation of injection well cluster (PTI-1S/M/D) and six three-level monitoring well nests (PT-1 through PT-6), and the subsequent baseline sampling.

### **3. Description of Activities**

In order to complete the work presented in the In-Situ Hexavalent Chromium Reduction Plan, Floodplain Reductive Zone Enhancement (Work Plan), dated August 2005, and the Final Addendum to the In-Situ Hexavalent Chromium Reduction Plan, Floodplain Reductive Zone Enhancement (Work Plan Addendum), dated December 5, 2005, ARCADIS installed one injection well cluster and six monitoring well nests. These activities were conducted in January through February 2006. All drilling, well installation, well development and associated field activities were performed in accordance with the applicable procedures contained within the Sampling, Analysis, and Field Procedures Manual, PG&E Topock Program, Revision 1 (SAFPM).

The first of two pre-injection (baseline) groundwater monitoring events was conducted during the week of March 13, 2006.

Sections 3.1 through 3.4 discuss the following activities: injection well installation, monitoring well installation, well surveying, and baseline groundwater sampling, respectively.

#### **3.1 Injection Well Installation**

From January 24 to 28, 2006, Prosonic Corporation of Mesa, Arizona (Prosonic) installed one injection well cluster (PTI-1S/M/D) using rotosonic drilling techniques (Figure 2). During the advancement of each boring, a field geologist, under the supervision of a California Professional Geologist, recorded the lithology of the subsurface state in accordance with United Soil Classification System (USCS) by observing continuous core samples retrieved from the boreholes. Soil samples were collected from PTI-1D and will be reported elsewhere. The injection wells were constructed and developed in accordance with the Work Plan and Work Plan Addendum.

Table 1 summarizes well construction details. Appendix A presents boring logs and well construction details, while Appendix B contains the well development logs.

#### **3.2 Monitoring Well Installation**

Prosonic installed six three-level monitoring well nests (PT-1 through PT-6) using rotosonic drilling techniques from January 28 to February 14, 2006 (Figure 2). During the advancement of each boring, a field geologist, under the supervision of a California

Waste Discharge

PG&E Topock Compressor  
Station  
San Bernardino County,  
California

Professional Geologist, recorded the lithology of the subsurface state in accordance with the USCS by observing continuous core samples retrieved from the boreholes. Soil samples were collected from each boring and will be reported elsewhere. The three-level monitoring well nests were constructed and developed in accordance with the Work Plan and Work Plan Addendum. Each level was designated with S for the shallow screen interval, M for the middle screen interval or D for the deep screen interval.

Table 1 summarizes well construction details. Appendix A presents boring logs and well construction details, while Appendix B contains the well development logs.

### 3.3 Well Surveying

PG&E, under the supervision of a California-licensed land surveyor, surveyed the longitude, latitude, top-of-casing, and ground surface elevation of each injection and monitoring well on March 2, 2006.

### 3.4 Baseline Groundwater Sampling

Prior to injection activities, two baseline sampling events are planned. The first baseline monitoring event was performed at the injection wells (PTI-1S/M/D), the monitoring wells (PT-1 through PT-6) and three extraction wells (TW-2D, TW-3D and PE-1) between March 13 and March 18, 2006. Groundwater samples from each well were analyzed for hexavalent chromium (USEPA Method 7199) by Truesdail Laboratories (Truesdail); fluorescein (in-house method) by Ozark Underground Laboratory (Ozark); iodide (USEPA Method 300) by STL Laboratory; total chromium, dissolved and total iron, manganese, calcium, magnesium, arsenic, potassium, sodium (USEPA Method 6010B) nitrate, nitrite, sulfate, carbonate, bicarbonate alkalinity, chloride, bromide, phosphorous (USEPA Method 300) TOC (USEPA Method 415.5), and sulfide (USEPA Method 376.1) by EMAX Laboratories, Inc. (EMAX). Samples were collected, labeled and packaged according to the SAFPM.

Table 3 and 4 present the groundwater analytical results. As required under the MRP, calibration logs for field-monitoring instruments are included in Appendix C. Groundwater sampling logs are included in Appendix D.

Waste Discharge Requirements  
Order No. R7-2006-0008  
PG&E Topock Compressor Station  
San Bernardino County,  
California

#### 4. Sampling and Analytical Procedures

Groundwater sampling, and associated tasks, were performed in accordance with the applicable procedures contained in the SAFPM.

Prior to groundwater sampling, depth to waters were recorded for each well. This data was used to evaluate the volume of standing water in the well. Each well was purged using an in-series whale pump with dedicated polyethylene tubing. During the purge process, field parameters such as pH, specific conductance, temperature, color, odor, and depth to water were recorded (Table 2). Purging continued until 3-casing volumes had been removed and the field parameters were stabilized (+/- 10%). After completion of purging, the groundwater samples were collected into the appropriate containers. Monitoring wells PT-3M and PT-6S purged dry and were allowed to recover prior to sample collection. Extraction well (TW-2D, TW-3D and PE-1) samples were collected from dedicated sampling ports. Water was purged from the sample port prior to sampling the extraction wells, to remove any stagnant water from the port.

The samples were stored in coolers at 4° Celsius and transported to Truesdail, EMAX, STL and Ozark via a courier service under COC documentation. Truesdail, EMAX, and STL are certified by the California Department of Health Services (Certification #1247, #02116CA, and #2496, respectively) under the State of California's Environmental Laboratory Accreditation Program.

Analyses were performed in accordance with the latest edition of the "Guidelines Establishing Test Procedures for Analysis Pollutants" (40 CFR Part 136), or equivalent methods promulgated by the USEPA, as well as applicable procedures contained in the SAFPM.

Sampling of the injection well cluster (PTI-1S/M/D), three-level well nests (PT-1 through PT-6), and extraction wells (TW-2, TW-3, and PE-1) was conducted in accordance with the sampling frequency required by the MRP, as shown in Tables 2, 3 and 4. Sample results are summarized in Tables 3 and 4. As required by the MRP, calibration logs for field-monitoring instruments are presented in Appendix C. Sampling logs are presented in Appendix D. Copies of laboratory analytical results are presented in Appendix E.

## **5. Analytical Results**

Laboratory reports prepared by the certified analytical laboratories are presented in Appendix E. Summaries of field parameters and baseline parameters are presented in Tables 2, 3 and 4, respectively, for the injection well cluster (PTI-1S/M/D), the six three-level well nests (PT-1 through PT-6), and three extraction wells (TW-2, TW-3, and PE-1).

Table 5 identifies the laboratory that performed each analysis and lists the following required monitoring information:

- Sample Location
- Sample identification
- Sampler name
- Sample date
- Sample time
- Laboratory performing the analysis
- Analysis method
- Analysis date
- Laboratory technician

No operation or maintenance problems or other interruptions to remedial systems occurred during the reporting period.

**6. Conclusions**

This report summarizes the results of the month of March 2006 and first quarter 2006, which included the installation of injection well cluster (PTI-1S/M/D) and six three-level monitoring well nests (PT-1 through PT-6) and the first baseline sampling event. Injections have not been initiated. No temporal trends were noted because this was the first groundwater monitoring event.

There were no incidents of non-compliance with respect to the Order.

## LITHOLOGIC DESCRIPTION

WELL CONSTRUCTION		Depth	Headspace (ppm)	Blows/ft.	Sample	Key
#2/12 Sand		65				@ 63 ft bgs: changes to dark grayish brown to very dark grayish brown, 50% fine sand, 50% coarse sand, trace gravel.
2" PVC Screen PT-4M		70				@ 67 ft bgs: changes to 70 to 80% fine grained sand, 20 to 30% coarse grained sand, very wet.
Bentonite		75				Well Graded Sand with Gravel (SW), dark grayish brown (10YR 4/2), 60% sand (subrounded), 35% gravel (2mm to 10mm, subrounded to subangular), 5% clay/silt, loose, damp.
		80				@ 74 ft bgs: increased clay amount.
#30 Sand		85				Clayey Sand with Gravel (SC), dark reddish brown (5YR 3/2), 45% coarse sand, 35% gravel and cobbles (subrounded to very angular), 30% clay, loose to medium dense, moist, non-plastic.
#2/12 Sand		90				Well Graded Sand with Clay and Gravel (SW), dark reddish brown (5YR 3/2), 50% coarse sand, 35% gravel (subrounded to angular), 10% clay, 5% cobbles, medium dense, wet.
2" PVC Screen PT-4D		95				@ 79 ft bgs: changes to well graded sand with gravel, 5% clay to sand and gravel.
						@ 84 ft bgs: changes to 10% clay, loose to medium dense.
						@ 87 ft bgs: changes to 5% clay.
						@ 89 ft bgs: changes to 10 to 15% clay, medium dense to dense.
						@ 92 ft bgs: changes to dark reddish brown, 5% clay, gravel/cobble size increases (~2 inches).
						@ 94 ft bgs: changes to loose, medium dense.
						@ 97 ft bgs: changes to 0 to 15% clay.

## LITHOLOGIC DESCRIPTION

# LOG OF BORING PT-5

(Continued)

WELL CONSTRUCTION		Depth	Headspace (ppm)	Blows/ft.	Sample	Key	LITHOLOGIC DESCRIPTION
							(roots), medium soft.
	Bentonite	30					Poorly Graded Sand (SP), dark grayish brown (10YR 4/2), 95% fine grained sand, 5% silt, loose, wet.
#30 Sand		35					Well Graded Sand with Silt (SW), dark grayish brown (10YR 4/2), 90% fine sand, 5% silt, 5% clay, loose, wet.
#2/12 Sand		40					@ 37 ft bgs: changes to the 5% clay (chunks), very loose.
2" PVC Screen PT-5S		45					Sandy Clay (CL), very dark grayish brown (10YR 3/2), 80% clay, 20% fine sand, plastic, wet.
		50					Poorly Graded Sand (SP), dark grayish brown (10YR 4/2), 90% fine grained sand, 9% silt, 1% gravel (10mm rounded).
	Bentonite	55					@ 48 ft bgs: increases to coarse grained sand, subrounded, yellowish brown (10YR 5/4).
		55					@ 52 ft bgs: 6-inch layer of Sandy Clay (CL).
		55					Well Graded Gravel with Sand (GW), brown (10YR 4/3), 50% sand (subrounded to subangular), 30% gravel, 15% cobbles (subrounded to subangular, up to 5 inches), 5% silt, loose, wet.
#30 Sand		60					Well Graded Sand with Gravel (SW), yellowish brown (10YR 4/4), 80% coarse grained sand, 15% gravel (subrounded to subangular, 20mm), 5% cobbles (subrounded to subangular, up to 4 inches), very loose, wet.
#2/12 Sand		60					@ 63 ft bgs: changes to 5% clay (chunks).
2" PVC Screen PT-5M							

# LOG OF BORING PT-5

(Continued)

WELL CONSTRUCTION	Depth	Headspace (ppm)	Blows/ft.	Sample	Key	LITHOLOGIC DESCRIPTION
	65					Silty Sand with Gravel (ML), dark yellow brown (10YR 4/4), 50% silt, 30% fine sand, 15% gravel, 5% clay, 1% cobbles, very rounded to subangular, high plasticity, soft, wet. @ 66 ft bgs: volcanic clasts.
#2/12 Sand	70					@ 70 ft bgs: changes to Silt with Gravel, brown (10 YR 4/3), 60% silt, 30% gravel, 5% sand, 5% clay, low to medium plasticity, medium stiff, wet, trace volcanic clasts.
2" PVC Screen PT-5M	75					@ 73 ft bgs: 9-inch long, 14-inch circumference volcanic rock.
Bentonite	80					@ 75 ft bgs: changes to very saturated.
	85					Poorly Graded Gravel with Sand (GW), brown (7.5 YR 4/3) to dark brown (7.5 YR 4/3), 50% gravel and cobbles (from 5mm up to over a foot), 45% sand (coarse grained, subrounded and subangular), 5% silt, loose, wet.
#30 Sand	90					Well Graded Sand with Gravel (SW), dusky red (2.5 YR 3/2), 80% coarse sand, 15% gravel (2mm to 10mm, subrounded and very angular), 5% silt/clay (trace cobbles), loose to dense, wet. @ 85.5 to 86 ft bgs: very dense.
#2/12 Sand	95					@ 89 ft bgs: changes to very saturated, gravel up to 20mm, loose. @ 92 ft bgs: changes to 10% clay. @ 94 ft bgs: changes to 5% clay. @ 95.5 ft bgs: changes to Well Graded Sand, dark gray (10YR 3/1), 90% coarse sand (very angular to subrounded), 5% gravel (10mm), 5% clay, very loose, wet.
#2/12 Sand

#### **Field Parameter Measurements Taken During Purging**

**Remarks / Comments:**

Very slow well, not a good producer. Pump down to bottom of screen at 1.5 gpm. Reservoir at  $\approx$  1 ft / 2.5 cu. Well maintains pumping at 0.5 to 9.6 gpm w/ DWD 55 feet or  $\approx$  35 feet drawdown

Project Number:	<u>RC000689.0001.</u>	Task:	<u>00005</u>	Well ID:	<u>PE-1</u>
Date:	<u>03 - 17 -06</u>	Sampled By:	<u>J.Ely</u>		
Weather:	<u>SUNNY R 70s</u>	Recorded By:	<u>J.Ely</u>		
		Coded Duplicate No.:			

### Instrument Identification

PID	Water Quality Meter(s)
Model	
Serial #:	

#### Purging Information

Casing Material: \_\_\_\_\_  
Casing Diameter: \_\_\_\_\_  
Total Depth: \_\_\_\_\_  
Depth to Water: \_\_\_\_\_  
Water Column: \_\_\_\_\_  
Gallons/Foot: \_\_\_\_\_  
Gallons in Well: \_\_\_\_\_

Purge Technique (circle one):  Low-Flow  Remove 3 Well Volumes  Ball Dry  
Purge Equipment (circle one):  Submersible  Centrifugal  Bladder  Peristaltic  Bailer  
Screen Interval: From: \_\_\_\_\_ To: \_\_\_\_\_  
Pump Intake Setting:  
Volumes to be Purged:  
Total Volume Purged:  
Pump on:  On  Off

<b>Well Casing Volumes (gal/ft):</b>	2" = 0.16	3" = 0.37
	3½" = 0.50	4" = 0.65
	6" = 1.46	

### **Field Parameter Measurements Taken During Purging**

#### **Observations During Sampling**

Well Condition: \_\_\_\_\_ Purge Water Disposal: \_\_\_\_\_  
Color: \_\_\_\_\_ Turbidity(qualitative): \_\_\_\_\_  
Odor: \_\_\_\_\_ Other (OVA, HNU,etc.): \_\_\_\_\_

Sample ID: PE-1 Sample Date & Time: 3.17.06 1445  
Samples Analyzed For: See the COC
