**Subject: Topock IM-3 Fourth Quarter 2023 ARARs Letter
PG&E Topock Compressor Station, Needles, California
Interim Measure No. 3 Groundwater Treatment System**

Dear Ms. Dickerson and Ms. Guzman:

On March 22, 2022, IM-3 entered the layup mode per the approved IM-3 Decommissioning Work Plan. Pursuant to the IM-3 Decommissioning Work Plan, quarterly letters are required stating no operation and no discharge occurred during the previous quarter, until DTSC directs PG&E that it is no longer required to operate IM-3, at which point PG&E's compliance obligations with the IM-3 ARARs are complete.

During the Fourth Quarter 2023 (October 1 to December 31, 2023), IM-3 continued to be in layup mode with no operation and no discharge to the injection wells. The groundwater monitoring results for wells OW-1S/M/ D, OW-2S/M/D, OW-5S/M/D, CW-1M/D, CW-2M/D, CW-3M/D, and CW-4M/D will be submitted under separate cover, as part of the Remedy Monitoring Program.

If you have any questions regarding this information, please call me at (760) 903-3013 or Christina Hong at (626) 297-5292.

Sincerely,

David Diaz
Topock Site Operations Manager
