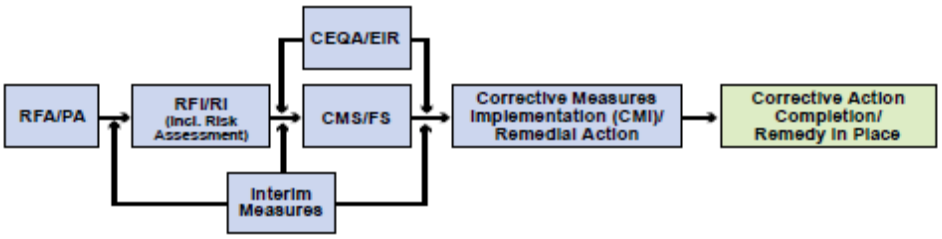
Subject: *Third Quarter 2022 Quarterly Progress Report, PG&E Topock Compressor Station, Needles, California* (PGE20180115A)

Dear Mr. Yue:

Enclosed is the Third Quarter 2022 Quarterly Progress Report for the Pacific Gas and Electric Company (PG&E) Topock Compressor Station located in Needles, California (the Site). In December 2021, startup began for Phase 1 of the groundwater remedy system including start of National Trails Highway in-situ reactive zone (IRZ) system operation, maintenance, and monitoring to address hexavalent chromium in groundwater. Operation of the IRZ injection and extraction wells using Topock Compressor Station power continued at the start of Third Quarter 2022. After an extended period of unplanned downtime in July and August 2022, continuous operation of the IRZ system resumed using generators in late August 2022. Groundwater and surface water monitoring was performed to evaluate the performance of the groundwater remedy to attain the remedial action objectives and comply with Applicable or Relevant and Appropriate Requirements.

In accordance with the reporting requirements outlined in the Basis of Design Report/Final (100%) Design Submittal for the Final Groundwater Remedy, this quarterly progress report presents an overview of the groundwater remedy and remedial action objectives; a summary of Third Quarter 2022 communications, operations, and performance; and recommendations and planned activities for the next reporting period.

Please contact me at 415.314.8530 if you have any questions about the quarterly progress report.



Sincerely,

Iain Baker
Chromium Remediation Manager

Topock Project Executive Abstract

Document Title:	Third Quarter 2022 Quarterly Progress Report, PG&E Topock Compressor Station, Needles CA
Submitting Agency:	DTSC and DOI
Final Document?	☒ Yes ☐ No
Date of Document:	December 9, 2022
Who created this document?: (i.e. PG&E, DTSC, DOI, Other)	PG&E
Priority Status:	☐ HIGH ☐ MED ☒ LOW
Is this time critical?	☐ Yes ☒ No
Type of Document:	☐ Draft ☒ Report ☐ Letter ☐ Memo ☐ Other / Explain:
Action Required:	☒ Information Only ☐ Review & Comment Return to: _____ By Date: _____ ☐ Other / Explain:
What does this information pertain to?	☐ Resource Conservation and Recovery Act (RCRA) Facility Assessment (RFA)/Preliminary Assessment (PA) ☐ RCRA Facility Investigation (RFI)/Remedial Investigation (RI) (including Risk Assessment) ☐ Corrective Measures Study (CMS)/Feasibility Study (FS) ☒ Corrective Measures Implementation (CMI)/Remedial Action ☐ California Environmental Quality Act (CEQA)/Environmental Impact Report (EIR) ☐ Interim Measures ☐ Other / Explain:
Is this a regulatory requirement?	☒ Yes ☐ No If no, why is the document needed?
What is the consequence of NOT doing this item? What is the consequence of DOING this item?	Submittal of this report is a compliance requirement under DTSC and DOI requirements.
Other Justification/s:	☐ Permit ☐ Other / Explain:
Brief Summary of Attached Document:	In December 2021, startup began for Phase 1 of the groundwater remedy system including start of National Trails Highway in-situ reactive zone (IRZ) system operation, maintenance, and monitoring to address hexavalent chromium in groundwater. Operation of the IRZ injection and extraction wells using Topock Compressor Station power continued at the start of Third Quarter 2022. After an extended period of unplanned downtime in July and August 2022, continuous operation of the IRZ system resumed using generators in late August 2022. Groundwater and surface water monitoring was performed to evaluate the performance of the groundwater remedy to attain the remedial action objectives and comply with Applicable or Relevant and Appropriate Requirements. In accordance with the reporting requirements outlined in the Basis of Design Report/Final (100%) Design Submittal for the Final Groundwater Remedy, this quarterly progress report presents an overview of the groundwater remedy and remedial action objectives; a summary of Third Quarter 2022 communications, operations, and performance; and recommendations and planned activities for the next reporting period Written by: PG&E
Recommendations:	None.

How is this information related to the Final Remedy or Regulatory Requirements?:	This report is required by DTSC and DOI as part of the Basis of Design Report/Final (100%) Design Submittal for the Final Groundwater Remedy.
Other requirements of this information?:	None.

Executive Summary

Startup of the Phase 1 groundwater remedy system at the Topock Compressor Station (TCS) in Needles, California (the Site) began in December 2021 including the start of National Trails Highway (NTH) in-situ reactive zone (IRZ) system operation, maintenance, and monitoring to address hexavalent chromium (Cr6) in groundwater. Operation of the IRZ injection and extraction wells using TCS power continued at the start of Third Quarter 2022. After an extended period of unplanned downtime in July and August 2022 due to TCS power loss, stormwater events, and re-energization troubleshooting, continuous operation of the IRZ system resumed using generators in late August 2022 through the end of the quarter. Ethanol injections into operational IRZ injection wells occurred once weekly, when operating. On September 26, 2022, ethanol dosing was increased to two injections per week.

Groundwater and surface water monitoring was performed in Third Quarter 2022 in accordance with the Basis of Design Report/Final (100%) Design Submittal for the Final Groundwater Remedy (Final BOD; CH2M Hill 2015a), Groundwater Remedy Phase 1 Interim Monitoring Plan (Phase 1 Monitoring Plan; Arcadis 2021), Standard Operating Procedures presented in Appendix B of the Phase 1 Monitoring Plan, and the PG&E Program Quality Assurance Project Plan (QAPP; CH2M Hill 2014; Critigen 2020) to evaluate the performance of the groundwater remedy to attain the Remedial Action Objectives (RAOs) and comply with Applicable or Relevant and Appropriate Requirements (ARARs). Key observations of Third Quarter 2022 remedy performance are highlighted below:

- The process control monitoring results indicated that initial or continued Cr6 treatment was observed at dose response monitoring wells MW-26, MW-31-060, MW-51, MW-78-070, MW-78-142, MW-79-058, MW-79-102, MW-80-057, and MW-80-082. These results indicate that increased flow to the southern IRZ injection wells (IRZ-27 [lower], IRZ-29, IRZ-31, IRZ-33, IRZ-35, and IRZ-37) in June 2022 had a positive impact on Cr6 treatment. To further enhance Cr6 treatment and generate reducing capacity, ethanol dosing at the IRZ injection wells was increased to two injections per week starting on September 26, 2022.
- Cr6 concentrations in the downgradient monitoring wells are evaluated to determine if concentrations are within expectations provided in the Final BOD (CH2M Hill 2015a). In Third Quarter 2022, Cr6 concentrations were below 32 micrograms per liter (µg/L), except at MW-39-100 and MW-77-187. Cr6 concentrations at MW-39-100 (ranging from 79 µg/L in August 2022, when the system was offline, to 240 µg/L in July 2022, when the system was operating) fluctuated in response to active system operation at IRZ-23, which pulled this portion of the downgradient plume from east to west when the system was actively operating. The sampling frequency at select monitoring wells downgradient of MW-39-100 was increased from quarterly in the Phase 1 Monitoring Plan to monthly to better evaluate changes in Cr6 concentrations over time in response to system operation. Cr6 concentrations at MW-77-187 (ranging from 8.80 µg/L in August 2022, when the system was offline, to 40 µg/L in July and September 2022, when the system was operating) fluctuated above and below 32 µg/L in conjunction with system operations. Cr6 concentrations at MW-39-100 and MW-77-187 and monitoring wells downgradient of those wells will be further evaluated in the monthly datasets.
- In-situ byproduct (dissolved arsenic, dissolved iron, and dissolved manganese) concentrations at the dose response and downgradient monitoring wells were below the action levels, except for the dissolved iron concentrations at MW-82-046 (7.3 milligrams per liter [mg/L]) and MW-53S (5.9 mg/L) collected on July 12 and August 24, 2022, respectively; see table below. Both monitoring wells are screened within the reducing rind with naturally occurring iron and elevated iron concentrations of 6.6 mg/L at MW-82-046 and 5.4 mg/L at MW-53S measured during the baseline period for this reporting program.

action level. Monitoring well MW-53S will be sampled in October 2022 to confirm whether dissolved iron concentrations are increasing above the action level. No operational changes were warranted in Third Quarter 2022.

- On the northern end of the NTH IRZ, the Cr6 plume was controlled. Westward gradients from the Colorado River to the floodplain were achieved during active operation of extraction wells, while easterly gradients were observed when IRZ-13S and IRZ-13D were not on during downtime due to electrical issues. However, during the period of easterly flow, the hydraulic gradient remained low (ranging from 0.0009 foot per foot [ft/ft] to 0.0018 ft/ft), Cr6 concentrations in the NTH IRZ extraction monitoring wells remained below 32 µg/L or within historical ranges near 32 µg/L (36 µg/L at MW-75-033), and Cr6 concentrations at the surface water monitoring locations remained non-detect, collectively demonstrating control of the Cr6 plume targeted by northern extraction.
- Remedy compliance monitoring data were collected in Third Quarter 2022 to evaluate progress towards achievement of RAOs 2, 3, and 4. RAO progress is anticipated to be evaluated throughout the duration of the remedy. Data collected each quarter will contribute to the overall evaluation.
- Constituents of Potential Concern (COPCs) Perimeter Assessment Plan (PAP) monitoring results in Third Quarter 2022 were below the trigger levels; therefore, no notifications or further actions were warranted in Third Quarter 2022.

The table below provides a summary of in-situ byproduct action level and COPC PAP trigger level exceedances from Third Quarter 2022 and associated response actions.

Program	Well	Constituent	Action Level or Trigger Level	Third Quarter 2022 Result	Response Actions
Process Control Monitoring	MW-82-046	Dissolved iron	Action Level: 6.6 mg/L	7.3 mg/L (July 12, 2022)	Re-sampled on August 10 (6 mg/L) and September 13, 2022 (5.5 mg/L). Results were below the action level. No further actions needed.
Process Control Monitoring	MW-56S	Dissolved iron	Action Level: 5.4 mg/L	5.9 mg/L (August 24, 2022)	Will re-sample in October 2022.

1 Introduction

Pacific Gas and Electric Company (PG&E) is implementing a final groundwater remedy to address hexavalent chromium (Cr6) in groundwater near the PG&E Topock Compressor Station (TCS) located in eastern San Bernardino County, 15 miles southeast of the City of Needles, California (the Site). PG&E is implementing the groundwater remedy at the TCS in conformance with the requirements of the Resource Conservation and Recovery Act (RCRA) and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The U.S. Department of the Interior (DOI) and the California Department of Toxic Substances Control (DTSC), collectively known at the 'Agencies,' executed a Memorandum of Understanding on November 22, 2011 establishing coordination guidelines for overseeing implementation of a groundwater response action at the TCS (DTSC and DOI 2011). In a coordinated effort, the DOI and DTSC selected the final groundwater remedy to address chromium in groundwater, which is presented in the Record of Decision (DOI 2010).

In November 2015, PG&E submitted a Basis of Design Report/Final (100%) Design Submittal (Final BOD), which presents the final design basis, design criteria, drawings, specifications, and operation and maintenance (O&M) requirements for the groundwater remedy (CH2M Hill, Inc. [CH2M Hill] 2015a). The infrastructure for the groundwater remedy is being constructed following the plans and procedures documented within the Construction/Remedial Action Work Plan (C/RAWP; CH2M Hill 2015b). Construction and startup of the groundwater remedy is proceeding in phases.

Construction of Phase 1 was completed in December 2021 sufficient for initial system startup. The design was modified during construction to accommodate conditions encountered including a plume footprint smaller than documented in the Final BOD. Modifications included changes to the remediation and monitoring well networks and associated infrastructure including deferral of wells to Phase 2. Construction of the Phase 2a remedy was initiated in First Quarter 2022. Construction of Phase 2b is anticipated to begin in 2023 and be completed in 2026.

In December 2021, startup began for Phase 1 of the groundwater remedy system including the start of National Trails Highway (NTH) in-situ reactive zone (IRZ) system operation, maintenance, and monitoring. O&M are being performed in accordance with the O&M Plan (Appendix L, Volume 1; CH2M Hill 2015a). Monitoring is being performed in accordance with the Sampling and Monitoring Plan (BOD SMP), with modifications, provided in the Final BOD O&M Manual (Appendix L, Volume 2; CH2M Hill 2015a) to evaluate the performance of the groundwater remedy to attain the Remedial Action Objectives (RAOs) and comply with Applicable or Relevant and Appropriate Requirements (ARARs). Because the groundwater remedy is being constructed in phases, a modified SMP was needed to suit the as-built Phase 1 of the groundwater remedy. PG&E submitted the Groundwater Remedy Phase 1 Interim Monitoring Plan (Phase 1 Monitoring Plan; Arcadis 2021) to the Agencies on October 1, 2021.

In accordance with the BOD SMP reporting requirements (CH2M Hill 2015a), this quarterly progress report provides a summary of the following elements for Third Quarter 2022 (July through September 2022; the reporting period):

- Overview of the groundwater remedy and RAOs;
- Communications Summary. Summary of remedy-related communications with the DTSC, DOI, PG&E, Tribes, and other project stakeholders, which have been distributed as part of community outreach efforts;
- Operations Summary. Description of routine and non-routine downtime, operational data, and process monitoring data; utilities and consumables used and waste handling/disposal; issues encountered with

system operation; system optimizations and maintenance performed; and material deviations from design documents and the O&M Plan;

- Performance Summary. Description of the monitoring events performed during the current reporting period, the monitoring results and interpretation of results, evaluation of Cr6 plume control, interpretation of progress towards the RAOs, and material deviations from design documents and the O&M Plan;
- O&M Green Remediation Evaluation Matrix (GREM) Summary. PG&E develops a semiannual GREM summary report to document various sustainability metrics generated by PG&E including the TCS. The GREM summary reports data regarding greenhouse gas reductions, savings from use of renewable energy, reductions in liquid and solid waste, and local economy boost. The GREM summary is reported under separate cover and is not provided in this quarterly progress report.
- Recommendations and planned activities for the next reporting period.

1.1 Remedial Action Objectives

As stated in the Final BOD (CH2M Hill 2015a), the RAOs for the groundwater remedy are to:

1. Prevent ingestion of groundwater as a potable water source exhibiting Cr6 concentrations that exceed the regional background concentration of 32 micrograms per liter (µg/L).
2. Prevent or minimize migration of total dissolved chromium and Cr6 in groundwater to ensure that concentrations in surface water do not exceed water quality standards that support the designated beneficial uses of the Colorado River (11 µg/L Cr6; United States Environmental Protection Agency [USEPA] 2022).
3. Reduce the mass of total dissolved chromium and Cr6 in groundwater at the Site to achieve compliance with ARARs in groundwater. This RAO will be achieved by meeting the cleanup goal of the regional background concentration of 32 µg/L of Cr6.
4. Ensure that the geographic location of the target remediation area does not permanently expand following completion of the remedial action.

1.2 Phase 1 Remedy Overview

Per the C/RAWP, Phase 1 of the groundwater remedy comprises the creation of an IRZ along NTH using a line of injection and extraction wells to circulate groundwater and distribute an organic carbon source to promote reduction of soluble Cr6 to the insoluble form: trivalent chromium (Cr3). The groundwater remedy is being constructed in two phases in accordance with the C/RAWP (CH2M Hill 2015b).

The infrastructure for the Phase 1 remedial system consists of the following components (**Figure 1.1**):

- A line of remedial wells along the NTH that comprise the NTH IRZ (18 remediation wells);
- A treatment system compound, situated on the MW-20 bench, that includes infrastructure for organic carbon amendment and system maintenance;
- A remedy-produced water conditioning (RPWC) system situated on the compressor station;
- Conveyance lines among the NTH IRZ remedials wells, the MW-20 bench treatment compound, and the RPWC system;

- A monitoring well network composed of monitoring wells that existed before the groundwater remedy (174 monitoring locations) and monitoring wells constructed for Phase 1 of the groundwater remedy (69 newly constructed monitoring locations; a total of 243 monitoring locations; see Section 3);
- Riverbank Extraction Wells (four extraction wells). The riverbank extraction wells are not currently plumbed into the remedial system, and were, therefore, not operated in Third Quarter 2022.

The NTH IRZ system is operated by extracting groundwater from the NTH IRZ extraction wells, amending the water with carbon substrate (ethanol), then injecting the amended water into the NTH IRZ injection wells. **Figure 1.2** shows a process flow diagram of the treatment compound at the MW-20 bench including the carbon amendment infrastructure. The ethanol injections stimulate microbially mediated reduction of Cr6 to Cr3. The stimulated conditions may also reduce or release other constituents such as iron, manganese, sulfate, nitrate, and arsenic. These parameters are monitored in the Groundwater Remedy Phase 1 Monitoring Program (Phase 1 Monitoring Program) including the process control monitoring and remedy compliance monitoring programs (see Section 1.3). The groundwater and surface water monitoring data collected as part of the Phase 1 Monitoring Program are used to assess how biogeochemical conditions are changing in the subsurface in response to NTH IRZ system operations, inform system operational adjustments as needed, and evaluate overall remedy effectiveness.

During Phase 1, the NTH IRZ system is planned to operate for a period of time, nominally for 6 months, followed by a period of downtime, nominally 18 months, during which time residual reducing capacity generated during injections will continue to treat Cr6 in groundwater. Residual reducing capacity could potentially be stored during active injections as reduced iron from iron reduction, sulfide from sulfate reduction, or as biomass from microbial growth. Establishment and maintenance of an adequate reducing capacity within the treatment zone (i.e., at the dose response wells along the NTH IRZ) is evaluated by dissolved iron and Cr6 concentrations and other redox indicators such as nitrate and sulfate. If these parameters indicate establishment of reducing conditions (i.e., dissolved iron concentrations increasing above baseline and Cr6 concentrations decreasing to less than 32 µg/L), then IRZ operations will be shut down, and monitoring of these parameters will continue. As the data indicate that reducing conditions are lost (e.g., through a decrease in dissolved iron concentrations, an increase in Cr6 concentrations, or an increase in other redox indicators such as nitrate), IRZ operations will resume.

Actual duration of the operational and rest periods will be determined based on the amount of active operation runtime each month and data collected in the process control monitoring program (see Section 1.3). Based on data collected in the first 6 months of operation in 2022, operations are planned to continue through the rest of 2022.

1.3 Phase 1 Monitoring Program Overview

The BOD SMP detailed monitoring programs for the groundwater remedy and developed Data Quality Objectives (DQOs) that guided the design of sampling locations, constituents, and frequencies and the methodology for evaluating the data to inform operations (Appendix L, Volume 2; CH2M Hill 2015a). The relevant programs from the BOD SMP, as described in the Phase 1 Monitoring Plan (Arcadis 2021), include:

- *Process control monitoring*. This program assesses the extent to which the NTH IRZ is functioning as designed according to the NTH IRZ DQOs presented in the BOD SMP (CH2M Hill 2015a) and listed below. The DQOs guide data collection and establish decision rules that outline how the data collected will be used to adjust system operations. The NTH IRZ decision rules and operational framework are provided on Figure 2.2-2 of the BOD SMP (Appendix L, Volume 2; CH2M Hill 2015a).

- The carbon substrate amendment system must be working to amend the organic carbon substrate into the recirculated groundwater (NTH IRZ DQO 1).
- The NTH IRZ must be complete and maintain Cr6 treatment over time (NTH IRZ DQO 2).
- In-situ byproduct (dissolved arsenic, dissolved manganese, dissolved iron, and dissolved barium) generation and migration from the NTH IRZ must be controlled (NTH IRZ DQO 3).
- Extraction on the north end of the NTH IRZ will be conducted to control Cr6 with the NTH and riverbank extraction systems (NTH IRZ DQO 4).
- Extraction will be conducted to minimize extraction of organic carbon and reduced metal byproducts (iron and manganese; NTH IRZ DQO 5).

The process control monitoring program consists of five components: dose response monitoring, downgradient well monitoring, northern NTH IRZ extraction monitoring, extraction well monitoring, and carbon amendment system monitoring. The process control monitoring network is shown on **Figure 1.3**. The carbon amendment monitoring locations are shown on **Figure 1.2;** these samples are collected from sampling ports located downstream of each in-line static mixer. Per the evaluation of the carbon amendment system data presented in the Second Quarter 2022 Quarterly Progress Report (Arcadis 2022c), the carbon amendment monitoring frequency was reduced to semi-annual; therefore, it is not discussed in this quarterly progress report. The next monitoring event is planned for Fourth Quarter 2022. Process control monitoring results are presented in Sections 2.2 and 3.2.1.

- *Remedy compliance monitoring*. This program consists of surface water and groundwater sampling to evaluate achievement of RAOs 2, 3, and 4, as defined in Section 1.1. Note that RAO 1, which involves prevention of the ingestion of water with elevated Cr6 concentrations, requires no action within the remedy compliance monitoring program because institutional controls are being implemented to achieve this RAO. The remedy compliance groundwater monitoring and surface water monitoring network is shown on **Figure 1.4**. Results are presented in Section 3.2.2.
- *Constituent of potential concern (COPC) monitoring.* The DTSC and DOI consider selenium, molybdenum, and nitrate as COPCs potentially related to site activities and have directed that these constituents be monitored throughout remediation. The RAOs defined in Section 1.1 are not applicable to the COPCs. The COPC monitoring program consists of surface water and groundwater sampling to monitor COPC concentrations during Phase 1 of remedy startup. The COPC monitoring network is shown on **Figure 1.5.** Results are presented in Section 3.2.3.
- *Water level monitoring*. The purpose of this program is to assess changes in hydraulic gradients in the floodplain affected by system operations. The pressure transducer monitoring network is shown on **Figure 1.6.** Results are presented in Sections 2.1 and 3.2.
- *RPWC system monitoring*. The purpose of this program is to monitor the quality of water at the RPWC system. The primary objective is to evaluate effluent water quality as it affects the reuse options. During Phase 1, the planned reuse is re-injection to the NTH IRZ wells. Results are presented in Section 2.2.
- *Former IM-3 injection area monitoring*. The purpose of this program is to evaluate the change in conditions in the IM-3 injection area following the end of injection associated with IM-3 operations. Former IM-3 injection area monitoring is performed annually; therefore, it is not discussed in this quarterly progress report. The next monitoring event is planned for Fourth Quarter 2022.

- *Domestic well sampling*. Per direction from the DTSC, domestic/private wells are sampled to evaluate the potential effects the remedy could impart to domestic wells chemically and hydraulically. Domestic wells are sampled biennially; therefore, it is not discussed in this quarterly progress report. The next sampling event is planned for Fourth Quarter 2022.

The Phase 1 Monitoring Program is intended to evaluate the first 2 years of remedy operation; the monitoring program will be re-evaluated and updated (as needed) after 2 years of operation of Phase 1.

1.4 Third Quarter 2022 Communications

This section summarizes key PG&E communications in Third Quarter 2022 associated with Phase 1 of the groundwater remedy:

- On July 6, 2022, PG&E notified the DTSC and DOI about an unplanned outage for the remedy July 5 through 6. The TCS shut down power to the remedy system on the morning of July 5. The down time was just more than 24 hours (PG&E 2022a).
- On July 13, 2022, PG&E notified the DTSC and DOI about an unplanned outage for the remedy. The TCS shut down power to the remedy system on the morning of July 12. During re-energization after the power shutdown, the switchgear experienced a fault, which required extensive troubleshooting to repair (PG&E 2022b).
- On September 2, 2022, PG&E submitted the Second Quarter 2022 Quarterly Progress Report (Arcadis 2022b) to the DTSC and DOI.
- On September 28, 2022, PG&E submitted the Second Quarter 2022 Well Performance Report (Arcadis 2022c) to the DTSC and DOI.

2 Third Quarter 2022 Operations Summary

This section provides a summary of the O&M tasks performed at the Site in Third Quarter 2022.

Operation using TCS power continued at the start of Third Quarter 2022. Following an unplanned system shutdown, operation resumed using generators for the remainder of Third Quarter 2022. System runtime, ethanol and recirculated groundwater injection volumes and flowrates, and average flowrates are summarized in **Tables 2.1** and **2.2**. An IRZ system operations and non-routine maintenance log is presented as **Table 2.3**.

In July, August, and September 2022, ethanol was injected into operational injection wells once weekly while the system was operating. On September 26, 2022, ethanol dosing was increased to twice weekly to increase Cr6 treatment throughout the IRZ (see Section 3.2.1.1.1). A total of 268 gallons of ethanol was injected in Third Quarter 2022. Volumes of ethanol injected per month and per individual well are provided in **Tables 2.1** and **2.2**.

The IRZ system was shut down on July 12 when power from the TCS was lost. The IRZ system could not be restarted following a switchgear fault and required extensive troubleshooting to repair. In the meantime, generators were brought on site to provide power to the IRZ system. Multiple storms flooded the IRZ vaults on August 24 and August 26, 2022, causing damage to electrical equipment. A subset of wells was brought back online on August 30, 2022 following the storms and generator arrival. The remaining wells planned for operation, except for IRZ-29 and IRZ-39, were brought online by September 13, 2022. Additional details on operational status throughout the quarter are provided in **Table 2.3**.

2.1 Water Level Monitoring Results

Water levels were monitored at a subset of monitoring wells to assess hydraulic gradients in the floodplain affected by system operations. Pressure transducer data were downloaded on August 30, 2022. Therefore, June, July, and August 2022 data are analyzed in this quarterly progress report, and September 2022 data will be analyzed in the Fourth Quarter 2022 quarterly progress report.

Figure 2.1 shows the average daily groundwater elevations for June, July, and August 2022 and the associated groundwater contours for Layers 1 and 2, Layer 3, and Layers 4 and 5. **Table 2.2** provides the active operation time for each IRZ extraction and injection well in June, July, and August 2022. The NTH IRZ extraction and injection wells were actively operating for the entire month of June 2022 and approximately half of July 2022 (12 days). The system was shut down for the second half of July 2022 and most of the month of August 2022.

The following observations were made based on the June, July, and August 2022 potentiometric surface maps:

- In June and early July 2022, the Colorado River stage was higher than groundwater elevations, resulting in the river generally losing to the aquifer within the floodplain area. During this period, flow gradients were generally inward from the river to the floodplain. In late July and August, the river stage dropped below groundwater elevations. During this period, flow gradients were generally outward from the floodplain to the river.
- During active extraction, cones of depression formed near IRZ extraction wells IRZ-13S (Layers 1 and 2), IRZ-13D (Layers 4 and 5), and IRZ-23 (Layer 3).
- In the area near injection wells, particularly near IRZ-17 through IRZ-20 in Layers 4 and 5, mounding was observed during periods of injection.

- During system shutdown in late July and August 2022, the cones of depression and mounding from active extraction and injection relaxed, and groundwater flowed eastward.

2.2 Well Fouling Monitoring and Prevention

The potential for extraction well fouling as the result of carbon injection is monitored during system operations (NTH IRZ DQO 5). This monitoring includes measuring total organic carbon (TOC) and metal byproducts at the extraction wells for conditions that may generate well fouling and specific capacity of the IRZ injection wells. The Third Quarter 2022 Well Performance Report (in progress), to be submitted under separate cover, provides an evaluation of overall well performance. However, the extraction well monitoring analytical results are provided herein.

Table 2.4 shows the baseline and monthly analytical results from extraction wells IRZ-9, IRZ-23, IRZ-13S, and IR Z-13D. The extraction wells are sampled monthly; however, the wells could not be sampled in July or August 2022 due to the system-wide power outage. TOC, total iron, dissolved iron, and dissolved manganese concentrations were generally lower than the reporting limits, with a few isolated exceptions. The isolated detections do not indicate a consistent trend that would be of concern for causing well fouling; therefore, no adjustments to operations were needed in Third Quarter 2022. Extraction well IRZ-9 was not operated in Third Quarter 2022.

The extraction wells will continue to be monitored monthly in Fourth Quarter 2022.

Table 2.4. Extraction Well Monitoring Results

Extraction Well	Sample Date	Active Time Operating (percent)	TOC (mg/L)	Total Iron (mg/L)	Dissolved Iron (mg/L)	Dissolved Manganese (mg/L)
IRZ-9	Baseline: January 2022	9	Less than 1	Less than 0.02	Less than 0.02	0.0027
IRZ-9	September 2022	Not operating	Less than 1	Less than 0.02	Less than 0.02	0.0016
IRZ-23	Baseline: December 2021	8	Less than 10	0.69	0.091 J	Less than 0.0005
IRZ-23	September 2022	87	Less than 1	Less than 0.02	Less than 0.02	Less than 0.0005
IRZ-13S	Baseline: March 2022	53	Less than 1	0.06	Less than 0.02	Less than 0.0005
IRZ-13S	September 2022	51	Less than 1	0.021	Less than 0.02	Less than 0.0005
IRZ-13D	Baseline: March 2022	53	Less than 50	Less than 0.02	0.059	0.062
IRZ-13D	September 2022	86	Less than 1	Less than 0.02	Less than 0.02	Less than 0.0005

Notes:
mg/L = milligram per liter
J = estimated concentration

The IRZ injection wells were backwashed weekly when these wells were operating. The backwash water was stored in frac tanks at the MW-20 bench while the RPWC system was being finished. The RPWC system is planned to begin operation in Fourth Quarter 2022. Before re-injection into the IRZ injection wells, the backwash water was monitored for field parameters and analyzed for select constituents (Cr6, total chromium, dissolved iron, and dissolved manganese). A summary of field parameters and analytical results from the backwash water is provided in **Table 2.5**. The data demonstrate that the water met the conditions specified in the BOD SMP for re-injection into IRZ injection wells (pH between 6.5 and 8.5).

2.3 Waste Management

In Third Quarter 2022, IRZ backwash water, purge water from well sampling, and stormwater pumped from vaults was stored in frac tanks at the MW-20 bench. The water was filtered and used for re-injection into IRZ injection wells.

3 Third Quarter 2022 Performance Summary

This section describes the groundwater and surface water monitoring performed in Third Quarter 2022 and summarizes the Third Quarter 2022 monitoring results.

Table 3.1 provides a summary of the Phase 1 Monitoring Program including monitoring locations, monitoring frequencies, and constituents analyzed. Remediation well and monitoring well construction details are provided in **Tables 3.2** and **3.3**, respectively.

3.1 Summary of Third Quarter 2022 Monitoring Performed

Groundwater and surface water monitoring was performed in Third Quarter 2022 in accordance with the Phase 1 Monitoring Plan (Arcadis 2021), Standard Operating Procedures (SOPs) presented in Appendix B of the Phase 1 Monitoring Plan, and the QAPP (CH2M Hill 2014; Critigen 2020). The elements of the Phase 1 Monitoring Program performed in Third Quarter 2022 are listed below:

- Process control monitoring;
- Remedy compliance monitoring;
- COPC monitoring; and
- Water level monitoring.

Monitoring wells included in each monitoring program vary by quarter. **Table 3.1** and **Figure 3.1** show the monitoring wells and surface water monitoring locations monitored in Third Quarter 2022.

The following extraction wells were not sampled in Third Quarter 2022 for the reason noted below:

- Extraction wells IRZ-09, IRZ-13D, IRZ-13S, and IRZ-23: Unable to sample in July and August due to power outage

Field parameters (temperature, pH, specific conductivity, oxidation-reduction potential [ORP], turbidity, total dissolved solids [TDS], and salinity) were measured before groundwater and surface water sample collection. Samples were sent to Asset Laboratories in Las Vegas, Nevada for laboratory analysis. Samples collected from monitoring wells in Arizona were sent to EMAX Laboratories, Inc. in Torrance, California.

3.1.1 Modifications to the Phase 1 Monitoring Program

The following modifications were made to the Phase 1 Monitoring Program in Third Quarter 2022:

- Extraction wells IRZ-9, IRZ-13S, IRZ-13D, and IRZ-23 continued to be sampled monthly (see **Section 2.2**). Samples were analyzed for the constituents listed in **Table 3.1** as well as sulfate and nitrate to determine the concentrations that are extracted at each well.
- Inactive injection wells IRZ-15, IRZ-21, and IRZ-25 were incorporated into the dose response monitoring program in Second Quarter 2022 to further evaluate the influence of active IRZ operations adjacent to extraction wells. The wells were not sampled in Third Quarter 2022 because the equipment at the wells was removed after March 29, 2022 storm damage.

- Select downgradient monitoring wells (MW-30-050, MW-34-080, MW-36-090, MW-36-100, MW-39-040, MW-39-050, MW-39-060, MW-39-070, MW-39-080, MW-39-100, MW-44-115, MW-44-125, MW-45-095a, MW-77-046, MW-77-102, MW-77-158, MW-77-187, MW-81-043, MW-81-098, MW-82-046, MW-82-112, MW-82-168, and MW-82-198) continued to be sampled monthly to better evaluate changes in Cr6 concentrations over time in response to system operation. Samples collected from these wells were analyzed for the constituents listed in **Table 3.1** as well as sulfate.
- Monitoring wells MW-167-185 and MW-168-180, located in the vicinity of the TCS, continued to be sampled monthly to evaluate changes in Cr6 concentrations over time.
- COPC Perimeter Assessment Plan (PAP) monitoring is conducted quarterly for PAP monitoring wells that are part of the dose response monitoring program and annually for PAP monitoring wells that are part of the downgradient monitoring program per the Phase 1 Monitoring Plan (Arcadis 2021). Nitrate/nitrite by USEPA method 353.2 was added for COPC PAP monitoring in addition to nitrate by USEPA Method 300.0 until enough data are collected to establish baseline (i.e., trigger levels) for nitrate.

3.1.2 Data Validation and Completeness

Analytical results were validated in accordance with the QAPP (CH2M Hill 2014; Critigen 2020) using the criteria of precision, accuracy, representativeness, comparability, and completeness (PARCC) to demonstrate that a sufficient number of representative samples was collected. The resulting analytical data can be used to support the decision-making process as measured by the PARCC findings. The following summary highlights the PARCC findings:

- Precision of the data was verified through the review of the laboratory data quality indicators that include matrix spike/matrix spike duplicate (MS/MSD) and field duplicate relative percent differences. Precision for several analytes fell outside of performance indicators due to matrix interference; data validation qualifiers were applied for results that did not meet quality control criteria.
- Accuracy of the data was verified through the review of the calibration, laboratory control samples, MS/MSDs, as well as the evaluation of method/field blank data. Accuracy was acceptable for all analyses with some exceptions due to matrix interference; data validation qualifiers were applied for results that did not meet quality control criteria.
- Representativeness of the data was verified through the samples' collection, storage, and preservation procedures and the verification of holding-time compliance. The laboratory did not note any problems with the samples' collection, holding time, and storage. Chain-of-custody issues were minor and were resolved and documented in the data packages.
- Comparability of the data was ensured using standard analytical procedures and standard units for reporting. Results obtained are comparable to industry standards in that the collection and analytical techniques followed approved, documented procedures.
- Completeness is a measure of the number of valid measurements obtained in relation to the total number of measurements planned. Completeness is expressed as the percentage of valid or usable measurements compared to planned measurements. Valid data are defined as all data that are not rejected for project use and flagged "R" for rejected during validation. All data are considered valid for project decision-making.

  The completeness goal of 90 percent was met for all method/constituent combinations.

3.2 Summary of Third Quarter 2022 Monitoring Results

This section summarizes the Third Quarter 2022 process control monitoring, remedy compliance monitoring, and COPC monitoring results. Field parameter monitoring results are presented in **Appendix A**. Analytical results for all monitoring wells and surface water monitoring locations in the Phase 1 Monitoring Program from January 2020 to September 2022 are provided in **Appendix B**. Laboratory reports from Third Quarter 2022 are provided in **Appendix C**.

3.2.1 Process Control Monitoring Results

This section summarizes the Third Quarter 2022 process control monitoring results and describes how the results are used to assess the NTH IRZ DQOs 2, 3, and 4 (Section 1.3). The Third Quarter 2022 process control monitoring results are presented in **Table 3.4**.

3.2.1.1 Dose Response and Downgradient Well Monitoring Results

Cr6 and in-situ byproduct results from the dose response and downgradient monitoring wells are used to determine development of NTH IRZ treatment (NTH IRZ DQO 2) and if in-situ byproduct generation and migration from the NTH IRZ is controlled (NTH IRZ DQO 3). The decision rules and operational framework for evaluating IRZ effectiveness and in-situ byproduct generation and migration are provided on Figure 2.2-2 of the BOD SMP (Appendix L, Volume 2; CH2M Hill 2015a). The following sections provide a Third Quarter 2022 performance summary of the dose response and downgradient monitoring wells based on the decision rules outlined on Figure 2.2-2 of the BOD SMP.

3.2.1.1.1 NTH IRZ Treatment Results

For those dose response monitoring wells associated with actively operating injection wells, dose response monitoring results, including changes in TOC, Cr6, and/or dissolved iron concentrations, are used to determine establishment of the NTH IRZ and Cr6 treatment. **Table 3.5** provides a performance summary for these parameters for the dose response wells in Third Quarter 2022. The performance summary is based on the decision rules and operational framework provided on Figure 2.2-2 of the BOD SMP.

As indicated in **Table 3.5**, initial or continued Cr6 treatment, based on declining Cr6 concentrations and/or increasing dissolved iron concentrations, was observed at the following monitoring wells:

- MW-26;
- MW-31-060;
- MW-51;
- MW-78-070;
- MW-78-142;
- MW-79-058;
- MW-79-102;
- MW-80-057 and

- MW-80-082.

On June 15, 2022, flow to the southern IRZ injection wells (IRZ-27 [lower], IRZ-29, IRZ-31, IRZ-33, IRZ-35, and IRZ-37) was increased by approximately 50 percent to enhance hydraulic distribution from each injection well. The July 2022 analytical results indicate that the increased flow had a positive impact on Cr6 treatment, initiating Cr6 treatment at monitoring wells MW-78-142, MW-79-058, and MW-80-057 and generally enhancing Cr6 treatment at the other monitoring wells listed above.

TOC was sampled at the dose response wells, and concentrations were non-detect. The lack of TOC detections could reflect the periodic ethanol dosing or organic carbon consumption before reaching the dose response wells as reducing conditions were initially being established or could indicate that not enough ethanol is being injected to reach the monitoring well locations. In addition, dissolved iron concentrations at the dose response wells have been low compared to baseline values, and Cr6 concentrations at most dose response wells have not decreased below 32 µg/L (see **Table 3.5**), indicating that sustained Cr6 reducing conditions have not yet been established. Therefore, to further enhance Cr6 treatment and generate reducing capacity, ethanol dosing at the IRZ injection wells was increased to two injections per week starting on September 26, 2022. This dosing frequency is consistent with frequency implemented during initial system startup (December 2021 through March 7, 2022) but is still less than the nominal dosing amount planned in the Final BOD (33 percent of the planned dosing; CH2M Hill 2015a). The Fourth Quarter 2022 results will be evaluated to determine whether the increased dosing improved reducing capacity.

3.2.1.1.2 Downgradient Hexavalent Chromium Results

In the floodplain (i.e., downgradient of the NTH IRZ), Cr6 concentrations in downgradient monitoring wells are anticipated to decrease to below 32 µg/L within 2 to 10 years based on the results of solute transport modeling (refer to Table 2.2-1 of the BOD SMP; Appendix L, Volume 2; CH2M Hill 2015a). Within the first 6 months of system operation, Cr6 concentration trends are expected to vary: concentrations at some downgradient monitoring wells may increase, whereas concentrations at other wells may remain stable or decrease. Table 2.1-4 of the BOD SMP (Appendix L, Volume 2; CH2M Hill 2015a) describes the anticipated changes in Cr6 concentrations at specific monitoring wells during the first 6 months to 1 year of system operation.

Table 3.6 provides a performance summary of the downgradient monitoring wells in Third Quarter 2022 to evaluate Cr6 distribution and changes in Cr6 concentrations downgradient of the NTH IRZ. **Figure 3.2** shows the distribution of Cr6 in downgradient monitoring wells in Third Quarter 2022 for wells monitoring Layers 1 through 5**.** Cr6 concentrations were below 32 µg/L at all monitoring wells, except at the following two wells:

- *MW-39-100*. Table 2.1-4 of the BOD SMP (Appendix L, Volume 2; CH2M Hill 2015a) indicates that Cr6 concentrations at this monitoring well may increase during the initial remedy operation. In Third Quarter 2022, Cr6 concentrations increased to 240 µg/L in July 2022 during active system operation, decreased to 79 µg/L in August 2022 when the system was offline, and increased to 110 µg/L in September 2022 when the system was turned back on. This fluctuation in Cr6 concentrations likely represents pulling the plume from east to west when the system is actively operating, as supported by **Figure 2.1b,** which shows flow in this area towards extraction well IRZ-23 during operation. Although the Third Quarter 2022 Cr6 concentrations at MW-39-100 exceeded 32 µg/L, concentrations at monitoring wells further downgradient (MW-34-080, MW-34-100, MW-36-070, MW-36-090, MW-36-100, and MW-45-095a) remained below 32 µg/L (non-detect to 3.5 µg/L). Cr6 concentrations at MW-39-100 and downgradient wells will continue to be monitored monthly.

- *MW-77-187*. Cr6 concentrations at MW-77-187 have increased since startup of remedy operations in December 2021. In Third Quarter 2022, Cr6 concentrations increased to 40 µg/L in July 2022 during active system operation, decreased to 8.80 µg/L in August 2022 when the system was offline, and increased to 40 µg/L in September 2022 when the system was turned back on. These data indicate that Cr6 concentrations are fluctuating above and below 32 µg/L in conjunction with system operations. The Cr6 concentration at monitoring well MW-46-175 located further downgradient of MW-77-187 remained below 32 µg/L in August 2022 (4.3 µg/L). As the IRZ is established by injections at IRZ-18, it is expected that treated water will flow toward MW-77-187, and the Cr6 concentration will decline. To verify this expectation, MW-77-187, along with the rest of the wells in the MW-77, MW-81, and MW-82 monitoring well clusters, will continue to be sampled monthly to evaluate changes in Cr6 concentrations over time in response to system operation.

3.2.1.1.3 In-Situ Byproduct Results

In-situ byproduct (dissolved arsenic, dissolved manganese, dissolved iron, and dissolved barium) generation and migration from the NTH IRZ are evaluated using results from the dose response and downgradient monitoring wells. The BOD SMP (CH2M Hill 2015a) provides maximum concentrations (i.e., action levels) for dissolved arsenic, dissolved manganese, and dissolved iron, which are presented in **Tables 3.5 and 3.6**. Barium is also monitored as part of the process control monitoring program, but action levels for barium are not specified in the BOD SMP; dissolved barium monitoring results from Third Quarter 2022 are presented in **Table 3.4**. If an individual monitoring well exhibits a natural baseline concentration above the given maximum, then the baseline concentration is used as the action level. Baseline concentrations for dissolved arsenic, dissolved iron, and dissolved manganese, presented in **Tables 3.5** and **3.6**, were established as follows:

- For monitoring wells installed before 2019, the maximum historical result was selected.
- For monitoring wells installed after 2019, the maximum result between January 2020 and December 2021 was selected, which did not include initial samples collected after well installation and allowed for water quality stabilization after installation.

If in-situ byproduct concentrations at a dose response or downgradient monitoring well are above the action levels, then a new sample is collected from the monitoring well within 45 days. If the re-sample confirms the exceedance, then the DTSC is notified, and operation of the remedial system will be adjusted as needed.

Figures 3.3 through **3.5** show the distribution of Third Quarter 2022 dissolved arsenic, dissolved iron, and dissolved manganese concentrations for the dose response and downgradient monitoring wells monitoring Layers 1 through 5. In-situ byproduct concentrations at the dose response and downgradient monitoring wells were below the action levels, except for the dissolved iron concentrations at downgradient monitoring wells MW-82-046 (7.3 mg/L; above the action level of 6.6 mg/L) and MW-53S (5.9 mg/L; above the action level of 5.4 mg/L) collected on July 12 and August 24, 2022, respectively. Both monitoring wells are screened within the reducing rind with naturally occurring iron and elevated iron concentrations of 6.6 mg/L at MW-82-046 and 5.4 mg/L at MW-53S measured during the baseline period for this monitoring program. Monitoring well MW-82-046 was subsequently sampled on August 10 and September 13, 2022, and the dissolved iron concentrations decreased to 6 mg/L and 5.5 mg/L, respectively. Both results were below the action level of 6.6 mg/L; therefore, no operational changes were warranted in Third Quarter 2022. Monitoring well MW-53S will be sampled in Fourth Quarter 2022 to confirm whether dissolved iron concentrations are increasing above the action level.

3.2.1.2 Northern NTH IRZ Extraction Monitoring Results

On the northern end of the NTH IRZ, the system is designed to control potential migration of Cr6 via groundwater extraction rather than the establishment of an IRZ. **Figure 1.3** shows the area addressed by northern extraction, with the northern extraction monitoring wells identified in green. Multiple lines of evidence can be used to evaluate achievement of control of the Cr6 plume at the northern end of the NTH IRZ (NTH IRZ DQO 4) including interpreted water levels, concentration trends, and numerical modeling (CH2M Hill 2015a).

In Third Quarter 2022, Cr6 concentrations and groundwater elevation data demonstrate control of the Cr6 plume in this area. Cr6 concentrations in the northern NTH IRZ extraction monitoring wells (green symbols on **Figure 1.3**) were below 32 µg/L (except at MW-75-033, which yielded 36 µg/L, consistent with historical measurements since 2020), and Cr6 concentrations at the surface water monitoring locations were non-detect at the reporting limit (see **Tables 3.4** and **3.8** and **Figure 3.2)**, indicating Cr6 plume control in Third Quarter 2022**.** Nearby monitoring wells MW-76-039/-156/-181/-218 yielded maximum Cr6 concentrations of 140, 13, 1,700, and 36 µg/L, respectively, in Third Quarter 2022. This northern portion of the contiguous Cr6 plume at the MW-76 cluster will ultimately be treated by injection at IRZ-15, but injections have not been conducted to date. In the meantime, northern extraction at IRZ-13S and IRZ-13D is being evaluated to understand the influence of IRZ operations on this portion of the Cr6 plume, as described below.

Hydraulic influence of IRZ-13S and IRZ-13D was evaluated using potentiometric surface maps (see Section 2.1) and horizontal hydraulic gradient vectors. Gradient vectors were calculated using water level elevations in three wells located in a triangular fashion (“triplets”). These vectors provide a unique solution for each well triplet, and viewing multiple such vectors in an area can describe the approximate groundwater flow field in an area. This is performed for the area around IRZ-13S and IRZ-13D in Layers 1 and 2 and Layers 4 and 5, which is where Cr6 is or has been present at concentration above 32 µg/L in the MW-75 and MW-76 monitoring well clusters. The monitoring wells used in the triplets are shown on **Figure 3.6,** and flow vector azimuth directions calculated from average monthly water levels from pressure transducers are listed in **Table 3.7**. Note that June, July, and August 2022 data are analyzed in this quarterly progress report, and September 2022 data will be analyzed in the Fourth Quarter 2022 quarterly progress report.

IRZ-13S and IRZ-13D operated approximately 87 percent of the month in June 2022 and approximately 34 percent of the month in July 2022. The extraction wells were shut down from July 12 to August 30, 2022. IRZ-13S and IRZ-13D resumed operation in September 2022 and operated approximately 86 percent and 51 percent of the month, respectively. Because system operations significantly varied throughout the reporting period, observations based on the potentiometric surface maps and flow vectors are discussed below by month and system operational status.

In June and July 2022, the potentiometric surface maps for Layers 1 and 2 (**Figure 2.1a**) show an area of groundwater flow toward IRZ-13S achieved by extraction operations including the area by MW-75-033 and MW-76-039. Flow vectors described by triplets MW-75-033/MW-96-045/MW-97-042 and MW-76-039/MW-86-030/MW-97-042 (**Figure 3.6a**) also show flow towards IRZ-13S in June 2022. Because extraction well IRZ-13S was only partially operating in July 2022, and river stage began decreasing below groundwater elevations during this month, the flow vectors show groundwater flow direction starting to shift eastward in July.

Similarly, in Layers 4 and 5, the potentiometric surface map (**Figure 2.1c**) for June 2022 shows an area of groundwater flow towards IRZ-13D including the area by MW-76-156/-181. In July 2022, the potentiometric surface map shows groundwater flow direction starting to shift towards the east in response to partial operation of IRZ-13D and the decreasing river stage. Flow vectors described by triplets MW-35-135/MW-49-135/MW-76-181,

MW-76-181/MW-86-120/MW-77-158, and MW-76-181/MW-86-140/MW-77-187 show flow toward IRZ-13D in June and July 2022 (**Figure 3.6b**).

In August 2022, groundwater flow direction in Layers 1 and 2 and Layers 4 and 5 was predominantly eastward in response to system shutdown and decreasing river stage, as shown by the potentiometric surface maps (**Figures 2.1a and 2.1c**) and flow vectors (**Figures 3.6a and 3.6b**). During this period, the hydraulic gradient remained low (ranging from 0.0009 foot per foot [ft/ft] to 0.0018 ft/ft), and concentrations in the NTH IRZ extraction monitoring wells remained below 32 µg/L or within historical ranges near 32 µg/L (36 µg/L MW-75-033), collectively demonstrating control of the Cr6 plume targeted by northern extraction. Once the system resumes operation, groundwater flow in Layers 1 and 2 and Layers 4 and 5 is anticipated to reverse direction toward IRZ-13S and IRZ-13D.

3.2.2 Remedy Compliance Monitoring Results

This section summarizes the Third Quarter 2022 remedy compliance monitoring results and provides a brief overview of progress towards achievement of RAOs 2, 3, and 4, as defined in Section 1.1, during remedy startup. RAO progress is anticipated to be evaluated during the remedy; data collected each quarter will contribute to the overall evaluation.

The Third Quarter 2022 remedy compliance monitoring results are presented in **Table 3.8**. Progress towards achievement of RAOs 2, 3, and 4 is summarized below.

- *RAO 2*. RAO 2 is evaluated by monitoring Cr6 concentrations in the Colorado River to verify that concentrations do not exceed the surface water quality standard (11 µg/L). In Third Quarter 2022, Cr6 concentrations at the 16 surface water monitoring locations were below the water quality standard of 11 µg/L (USEPA 2022); all results were non-detect at the reporting limit.

  Although RAO 2 is specifically intended to address Cr6, IRZ in-situ byproducts dissolved arsenic and dissolved manganese are also monitored in the Colorado River to verify that concentrations do not exceed the surface water quality standards. In Third Quarter 2022, dissolved arsenic concentrations at the 16 surface water monitoring locations were below the National Recommended Water Quality Criteria (NRWQC) for aquatic life of 150 µg/L. There is no NRWQC for aquatic life for dissolved manganese (USEPA 2022). Dissolved arsenic and dissolved manganese concentrations were below the California primary and secondary maximum contaminant levels (MCLs) of 10 µg/L (primary MCL) and 0.05 mg/L (secondary MCL), respectively (State of California 2022), except for dissolved manganese concentrations at C-MAR-S (0.14 mg/L) and C-MAR-D (0.13 mg/L). Monitoring location C-MAR is on the Arizona side of the Colorado River, and results reflect naturally occurring conditions (**Figure 1.4**).

- *RAO 3*. RAO 3 is evaluated by monitoring changes in groundwater Cr6 concentrations inside the plume boundary (i.e., mass reduction) and assessing the lateral and vertical distributions of Cr6 concentrations across the plume. This RAO will be achieved by meeting the cleanup goal of 32 µg/L of Cr6.

  Changes in Cr6 concentrations inside the plume as a result of IRZ system operations are discussed in Section 3.2.1.1. In Third Quarter 2022, Cr6 treatment (i.e., decreasing Cr6 concentrations) was observed at nine dose response monitoring wells. **Figure 3.2** shows the distribution of Cr6 in groundwater across the Site in Third Quarter 2022 for wells monitoring Layers 1 through 5. As IRZ system operations continue, Cr6 data from monitoring wells located inside the plume will continue to be collected and assessed to evaluate progress towards this RAO.

- *RAO 4*. RAO 4 is evaluated by monitoring Cr6 and in-situ byproduct concentrations (dissolved arsenic and dissolved manganese) outside of the target remediation area (i.e., baseline Cr6 plume boundary) to verify that concentrations do not permanently increase following completion of the remedial action. Additional data collection over a longer period is needed to evaluate progress towards this RAO.

3.2.3 COPC Monitoring Results

This section summarizes the Third Quarter 2022 COPC monitoring results (dissolved selenium, dissolved molybdenum, and nitrate) and provides an evaluation of the results in accordance with the COPC PAP. The Third Quarter 2022 COPC monitoring results are presented in **Table 3.9**.

The COPC PAP was developed to notify the DTSC when COPC threshold concentrations (i.e., trigger levels) in select outer plume compliance groundwater monitoring wells (i.e., COPC PAP monitoring wells) are exceeded. Thirty-one monitoring wells are included in the COPC PAP; however, not all COPC PAP monitoring wells were scheduled for sampling in Third Quarter 2022 (see **Table 3.1**). The trigger levels are based on Shewhart control limits calculated from the most recent eight sample results for each monitoring well; the method for calculating the trigger levels is provided in Appendix D of the Fourth Quarter 2021 Quarterly Progress Report (Arcadis 2022a). The COPC PAP decision tree, also provided in Appendix D of the Fourth Quarter 2021 Quarterly Progress Report (Arcadis 2022a), outlines notifications and actions to be taken when COPC concentrations in a COPC PAP monitoring well exceed a trigger level.

In Third Quarter 2022, the COPC concentrations in the COPC PAP monitoring wells were below the trigger levels; therefore, no notifications or further actions were warranted in Third Quarter 2022.

4 Recommendations and Planned Activities for Next Reporting Period

Phase 1 remedy operations and the Phase 1 Monitoring Program will continue to be performed in Fourth Quarter 2022 (October to December 2022) in accordance with the O&M Plan (CH2M Hill 2015a) and Phase 1 Monitoring Plan (Arcadis 2021). Because the system operated intermittently in the First Half of 2022, reducing conditions are still being established; therefore, IRZ operations will continue (see Figure 2.2-2 of the BOD SMP [CH2M Hill 2015a]).

In addition to routine remedy operations and monitoring, the following activities are planned for Fourth Quarter 2022:

- Injection wells closest to an extraction well (IRZ-15, IRZ-21, and IRZ-25), along with extraction well IRZ-9, will remain offline.
- Initiate operation of the RPWC system and perform RPWC system monitoring in accordance with the BOD SMP (CH2M Hill 2015a).
- Continue to sample extraction wells IRZ-9, IRZ-13S, IRZ-13D, and IRZ-23 monthly (while operational) in Fourth Quarter 2022 to evaluate the potential for well fouling. In addition, sulfate and nitrate will be analyzed to determine the concentrations that are extracted at each well.
- Analyze samples collected from dose response monitoring wells MW-31-060, MW-26, and MW-51 for TOC using methods 5310C and 5310B and ethanol to compare results.
- Continue to sample select downgradient monitoring wells (MW-30-050, MW-34-080, MW-36-090, MW-36-100, MW-39-040, MW-39-050, MW-39-060, MW-39-070, MW-39-080, MW-39-100, MW-44-115, MW-44-125, MW-45-095a, MW-67-185, MW-68-180, MW-77-046, MW-77-102, MW-77-158, MW-77-187, MW-81-043, MW-81-098, MW-82-046, MW-82-112, MW-82-168, and MW-82-198) monthly to evaluate changes in Cr6 concentrations in response to system operation.
- Continue to analyze COPC PAP monitoring wells for nitrate by Method 300.0 and nitrate/nitrite by USEPA Method 353.2 quarterly to collect sufficient data to establish baseline (i.e., trigger levels) for nitrate.
- Continue construction of the Phase 2a remedy.

IRZ operations, monitoring, and monitoring results will be reported in a Fourth Quarter 2022 Quarterly Progress Report. A Fourth Quarter 2022 Well Performance Report will be submitted to document well performance tracking data from Fourth Quarter 2022 in accordance with the O&M Plan (CH2M Hill 2015a).

Notes:

[a] The difference between extraction and injection volume is a reflection of flow totalizer accuracy.

[a] Run time in hours is calculated from extraction well operating hours over the course of the month

[b] Percent run time is calculated from extraction operating well hours divided by the total hours in the month x 100%.

Abbreviations:

-- = not applicable
gal = gallon
gpm = gallon(s) per minute
IRZ = In-Situ Reactive Zone
NTH = National Trails Highway

Table 2.3
NTH IRZ System Operations and Non-Routine Maintenance Log
Third Quarter 2022 Quarterly Progress Report
Pacific Gas and Electric Company, Topock Compressor Station, Needles, California

Date	Approximate IRZ Systemwide Down Time (days)	Approximate IRZ Systemwide Down Time (hours)	Operations and Maintenance Log	Notes
6/30/2022	--	--	System re-energized. Wells operating: Extraction wells: IRZ-13S, IRZ-13D, IRZ-23. Injection wells: IRZ-16, IRZ-17, IRZ-18, IRZ-20, IRZ-27, IRZ-29, IRZ-31, IRZ-33, IRZ-35, IRZ-37, IRZ-39.	--
7/5/2022	--	--	Ethanol dosing occurred.	--
7/5/2022 through 7/6/2022	1.0	24.0	IRZ system offline.	TCS power loss.
7/7/2022	--	--	Processed backwash water into conditioned water storage tank.	--
7/8/2022	--	--	Backwashed injection wells IRZ-16, IRZ-17, IRZ-18, IRZ-20, IRZ-27, IRZ-29, IRZ-31, IRZ-33, IRZ-35, IRZ-37.	--
7/11/2022	--	--	Reinjected conditioned water into injection wells.	--
7/12/2022 through 8/30/2022	49	1177.3	IRZ system offline.	TCS power loss. Restart delayed due to switchgear fault and reenergization troubleshooting.
8/30/2022	--	--	IRZ system resumed operation using generators. Wells operating: Extraction wells: IRZ-13D, IRZ-23 Injection wells: IRZ-16, IRZ-17, IRZ-20, IRZ-31, IRZ-33.	Remaining wells and affiliated equipment inspected for damage from stormwater that entered vaults during 8/24 and 8/26 thunderstorms.
8/31/2022	--	--	Ethanol dosing occurred.	--
9/1/2022	--	--	Injection well IRZ-18 resumed operation.	--
9/2/2022	--	--	Backwashed injection wells IRZ-16, IRZ-17, IRZ-20, IRZ-31, and IRZ-33.	--
9/3/2022 through 9/6/2022	2.9	70.0	IRZ system offline.	Low diesel exhaust fuel in generators.
9/6/2022	--	--	IRZ system resumed operating using generators. Wells operating: Extraction wells: IRZ-13D, IRZ-23. Injection wells: IRZ-16, IRZ-17, IRZ-18, IRZ-20, IRZ-31, IRZ-33.	--
9/7/2022	--	--	Ethanol dosing occurred.	--
9/9/2022	--	--	Backwashed injection wells IRZ-16, IRZ-17, IRZ-20, and IRZ-33. Reinjected conditioned water into injection wells.	Injection wells IRZ-18 and IRZ-31 were not backwashed, as staff prepared wells for expected rainstorms over the weekend.
9/12/2022	0.3	6.0	IRZ system offline.	Thunderstorms caused rain to enter vaults. High level alarms in vaults caused system shutdown.
9/13/2022	--	--	Injection wells IRZ-27, IRZ-35 and IRZ-37 and extraction well IRZ-13S resumed operation.	--

Table 2.3
NTH IRZ System Operations and Non-Routine Maintenance Log
Third Quarter 2022 Quarterly Progress Report
Pacific Gas and Electric Company, Topock Compressor Station, Needles, California

Date	Approximate IRZ Systemwide Down Time (days)	Approximate IRZ Systemwide Down Time (hours)	Operations and Maintenance Log	Notes
9/13/2022	--	--	Ethanol dosing occurred.	--
9/14/2022	--	--	Samples collected from IRZ-9, IRZ-13, and IRZ-23.	--
9/16/2022	--	--	Backwashed injection wells IRZ-16, IRZ-17, IRZ-18, IRZ-20, IRZ-27, IRZ-31, IRZ-33, IRZ-35, and IRZ-37.	--
9/19/2022 through 9/20/2022	0.6	13.5	IRZ system offline.	Drip leak between the flange and block valve in IRZ-35/37 vault caused sump high level alarm.
9/20/2022	--	--	Ethanol dosing occurred.	--
9/20/2022 through 9/22/2022	--	--	Injection wells IRZ-31, IRZ-33, IRZ-35, and IRZ-37 and extraction well IRZ-13S offline for approximately 2 days to repair leak in IRZ-35/37 well vault.	--
9/23/2022	--	--	Backwashed injection wells IRZ-16, IRZ-17, IRZ-18, IRZ-20, IRZ-27, IRZ-31, IRZ-33, IRZ-35, and IRZ-37. Reinjected conditioned water into injection wells.	--
9/26/2022	--	--	Ethanol dosing occurred. Increased ethanol dosing to twice weekly to increase treatment throughout the IRZ.	--
9/27/2022	--	--	Processed backwash water into conditioned water storage tank. Backwash samples collected.	--
9/28/2022	--	--	Backwashed injection wells IRZ-16, IRZ-17, IRZ-18, IRZ-20, IRZ-27, IRZ-31, IRZ-33, IRZ-35, and IRZ-37. Increased backwash duration to 20 minutes per well.	--
9/28/2022 through 9/30/2022	--	--	Reinjected conditioned water into injection wells.	--
9/29/2022	--	--	Ethanol dosing occurred.	--

Abbreviations:
-- = not applicable
IRZ = in-situ reactive zone
NTH = National Trails Highway
TCS = Topock Compressor Station

Table 2.5
Backwash Water Field Parameters and Analytical Results
Third Quarter 2022 Quarterly Progress Report
Pacific Gas and Electric Company, Topock Compressor Station, Needles, California

Sample Description	Sample Date	Sample Type	Hexavalent Chromium (µg/L)	Total Chromium (µg/L)	Dissolved Iron (mg/L)	Dissolved Manganese (mg/L)	Temperature (deg C)	Dissolved Oxygen (mg/L)	Specific Conductance (µS/cm)	pH	ORP (mV)	Turbidity (NTU)

Notes:
[a] This value was likely recorded incorrectly in the field.
[b] This value is likely a fault result due to instrument error.

Abbreviations:
-- = not available
< = not detected at the reporting limit, as shown
deg C = degrees Celsius
mg/L = milligram(s) per liter
mV = millivolts
N = primary sample
NTU = nephelometric turbidity units
ORP = oxidation-reduction potential
µg/L = microgram(s) per liter
µS/cm = microSiemens per centimeter

CAB_MIXER_606									X						M(Q), SA [5]															
CAB_MIXER_607									X						M(Q), SA [5]															

Notes:

1. The monitoring program will be re-evaluated after 2 years of operation.

2. MW-58-115, MW-58-205, MW-64-150, MW-64-205, MW-64-260: FLUTe™ equipment was removed from the wells and these depth intervals are no longer sampled. MW-54BR and MW_64 are currently sampled as part of the Phase 1 Monitoring Program.

[1] Ammonium and nitrite will be monitored for the first year. If not detected within the first year of monitoring, sampling for these analytes will be discontinued. If increases in ammonium or nitrite concentrations are detected in dose response wells, recommendations for continued sampling and potential expansion of the monitoring network for these analytes will be provided.

[2] Other dissolved metals: boron, calcium, magnesium, potassium, sodium, and vanadium

[3] Chloride and fluoride

[4] Dissolved calcium, dissolved magnesium, dissolved potassium, dissolved sodium, chloride, fluoride

[5] Samples are collected biweekly (1 time every 2 weeks) until the system operations are verified. The sampling frequency is reduced to semi-annual thereafter.

X(X): Frequency for the first year (yr) or quarter (Q); frequency reduction to be considered thereafter
A = Annually
B = biennially (every 2 years)
COPC = constituent of potential concern
ID = identification
IM-3 = Interim Measure 3
IRZ = In-site Reactive Zone
M = Monthly
NTH = National Trails Highway
Q = Quarterly
SA = Semi-annually

Notes:

a. At triple-screened wells IRZ-25 and IRZ-27, well intervals can only be packed off to operate as two discrete intervals (e.g., by combining the upper and middle screens, by combining the middle and lower screens).

b. At IRZ-33, the dual screens were separated by only filter pack and no bentonite.

Notes:

a. At triple-screened wells IRZ-25 and IRZ-27, well intervals can only be packed off to operate as two discrete intervals (e.g., by combining the upper and middle screens, by combining the middle and lower screens).

b. At IRZ-33, the dual screens were separated by only filter pack and no bentonite.

Abbreviations:

-- = not applicable
bgs = below ground surface
NAD83 = North American Datum of 1983
NAVD88 = North American Vertical Datum of 1988

Abbreviations:
-- = not applicable or not available
< = not detected at reporting limit, as shown
FD = field duplicate
ID = identification
J = estimated concentration
mg/L= milligram(s) per liter
N = primary sample
µg/L = microgram(s) per liter

Table 3.5
NTH IRZ Dose Response Monitoring Wells Performance Summary
Third Quarter 2022 Quarterly Progress Report
Pacific Gas and Electric Company Topock Compressor Station, Needles, California

Monitoring Well ID	IRZ Injection Well ID	Sample Date	TOC			Cr6						Dissolved Iron				Dissolved Arsenic			Dissolved Manganese			Evidence of Treated Groundwater at Well[g]	Are In-Situ Byproducts Controlled?	Operational Response and Reasoning[h]
			TOC Baseline[a] (mg/L)	TOC (mg/L)	Is TOC within the Target Range of 15 - 50 mg/L[a]?	Cr6 Baseline[c] (µg/L)	Cr6 (µg/L)	Change from Baseline Concentration (µg/L)	Percent Change from Baseline Concentration (%)[d]	Are Cr6 Concentrations Decreasing Compared to the Baseline Concentration?	Is Cr6 < 32 µg/L?	Dissolved Iron Baseline[f] (mg/L)	Dissolved Iron (mg/L)	Are Dissolved Iron Concentrations above Baseline?	Is Dissolved Iron < 5 mg/L[e]? If Dissolved Iron > 5 mg/L, Is It < Baseline?	Dissolved Arsenic Baseline[f] (µg/L)	Dissolved Arsenic (µg/L)	Is Dissolved Arsenic < 15 µg/L[e]? If Dissolved Arsenic > 15 µg/L, Is It < Baseline?	Dissolved Manganese Baseline[f] (mg/L)	Dissolved Manganese (mg/L)	Is Dissolved Manganese < 5 mg/L[e]? If Dissolved Manganese > 5 mg/L, Is It < Baseline?

Notes:

a. Baseline TOC concentrations are defined by the most recent sampling result prior to IRZ system startup. Note that if a result was non-detect at an elevated reporting limit, previous sampling events were considered to develop a more conservative baseline concentration.

b. Anticipated target ranges were set forth in the NTH IRZ Injection Decision Rules and Operational Framework (CH2M Hill 2015).

c. Baseline Cr6 concentrations represent the maximum concentration observed at each monitoring well between January 2020 and December 2021.

d. In comparison to the baseline concentration, a negative value indicates a decrease in concentration and a positive value indicates an increase in concentration.

e. Anticipated comparison values were set forth in the NTH IRZ Injection Decision Rules and Operational Framework (CH2M Hill 2015).

Table 3.5
NTH IRZ Dose Response Monitoring Wells Performance Summary
Third Quarter 2022 Quarterly Progress Report
Pacific Gas and Electric Company Topock Compressor Station, Needles, California

Monitoring Well ID	IRZ Injection Well ID	Sample Date	TOC			Cr6						Dissolved Iron				Dissolved Arsenic			Dissolved Manganese			Evidence of Treated Groundwater at Well[g]	Are In-Situ Byproducts Controlled?	Operational Response and Reasoning[h]
			TOC Baseline[a] (mg/L)	TOC (mg/L)	Is TOC within the Target Range of 15 - 50 mg/L[a]?	Cr6 Baseline[c] (µg/L)	Cr6 (µg/L)	Change from Baseline Concentration (µg/L)	Percent Change from Baseline Concentration (%)[d]	Are Cr6 Concentrations Decreasing Compared to the Baseline Concentration?	Is Cr6 < 32 µg/L?	Dissolved Iron Baseline[f] (mg/L)	Dissolved Iron (mg/L)	Are Dissolved Iron Concentrations above Baseline?	Is Dissolved Iron < 5 mg/L[e]? If Dissolved Iron > 5 mg/L, Is It < Baseline?	Dissolved Arsenic Baseline[f] (µg/L)	Dissolved Arsenic (µg/L)	Is Dissolved Arsenic < 15 µg/L[e]? If Dissolved Arsenic > 15 µg/L, Is It < Baseline?	Dissolved Manganese Baseline[f] (mg/L)	Dissolved Manganese (mg/L)	Is Dissolved Manganese < 5 mg/L[e]? If Dissolved Manganese > 5 mg/L, Is It < Baseline?			

f. Baseline dissolved iron, dissolved arsenic, and dissolved manganese concentrations represent the maximum historical concentration observed at each monitoring well. For wells installed after 2019, baseline concentrations represent the maximum concentration observed at each monitoring well between January 2020 and December 2021.

g. Evidence of treated groundwater at the monitoring well is determined by changes in TOC, Cr6, and/or in-situ byproduct (dissolved iron, dissolved arsenic and dissolved manganese) concentrations, as outlined in the NTH IRZ Injection Decision Rules and Operational Framework (CH2M Hill 2015). Additional information, including changes in nitrate and sulfate concentrations, is also used to support evidence of treated groundwater.

h. The need for an operational response is determined based on evidence of treated groundwater at the monitoring well and control of in-situ byproducts, as outlined in the NTH IRZ Injection Decision Rules and Operational Framework (CH2M Hill 2015).

Abbreviations:

<x = not detected at the reporting limit
< = less than
Cr6 = hexavalent chromium
ID = identification
IRZ = in-situ reactive zone
J = estimated concentration
mg/L= milligram(s) per liter
N = no
N* = No, the result is not detected at the reporting limit, and as such is not considered within the target range or above baseline.
NTH = National Trails Highway
TOC = total organic carbon
Y = yes
µg/L = microgram(s) per liter

Notes:

a. Baseline Cr6 concentrations represent the maximum concentration observed at each monitoring well between January 2020 and December 2021.

b. In comparison to the baseline concentration, a negative value indicates a decrease in concentration and a positive value indicates an increase in concentration.

c. Anticipated change in Cr6 concentrations and comparison values were determined from the NTH IRZ Injection Decision Rules and Operational Framework (CH2M Hill 2015).

d. Baseline dissolved iron, dissolved arsenic, and dissolved manganese concentrations represent the maximum historical concentration observed at each monitoring well. For wells installed after 2019, baseline concentrations represent the maximum concentration observed at each monitoring well between January 2020 and December 2021.

e. The need for an operational response is determined based on anticipated changes in Cr6 concentrations and control of in-situ byproducts, as outlined in the NTH IRZ Injection Decision Rules and Operational Framework (CH2M Hill 2015).

Abbreviations:

<x = not detected at the reporting limit
Cr6 = hexavalent chromium
ID = identification
IRZ = in-situ reactive zone
J = estimated value
mg/L= milligram(s) per liter
N = no
N* = No, the result is not detected at the reporting limit, and as such is not considered above baseline.
NTH = National Trails Highway
Y = yes
Y* = Yes, the result is not detected at an elevated reporting limit, and as such is not considered above the comparison criteria.
µg/L = microgram(s) per liter

- CALCULATED FLOW VECTOR IN JUNE 2022
- CALCULATED FLOW VECTOR IN JULY 2022
- CALCULATED FLOW VECTOR IN AUGUST 2022

Range of Hydraulic Gradients

- = 0.0001 to 0.001 ft/ft
- = 0.001 to 0.003 ft/ft
- = 0.003 to 0.009 ft/ft

Notes:
1. NTH = National Trails Highway
2. IRZ = in-situ reactive zone
3. The arrow length indicates the magnitude of the hydraulic gradient
4. ft/ft = feet per foot

0 200 400 Feet N

Abbreviations:

-- = not available
deg C = degrees Celsius
mg/L = milligrams per liter
mV = millivolts
nm = not measured
NTU = nephelometric turbidity units
ORP = oxidation-reduction potential
ppt = parts per thousand
µS/cm = microsiemens per centimeter

Workorder No.: N051580

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 11, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Dilution was necessary for sample N051580-002 due to matrix interference. Sample was analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Sample was reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Manganese in QC samples N051585-001CMS and N051585-001CMSD since the analyte concentration in the sample is disproportionate to the spike level. Post Spike (PS) passed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N051569-014CMS and N051569-014CMSD at lower dilution possibly due to matrix interference. QC samples were diluted and recovery passed criteria. Thus sample reference N051569-014 and MS/MSD were reported at 5x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [X] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

Preservatives: H=HCL; N=HNO_3; S=H_2SO_4; C=4°C; Z=$Zn(AC)_2$; O=NaOH; T=$Na_2S_2O_3$; Others/Specify: B (NH4)2SO4/NH4OH

Container Type: T=Tube; V=VOA; P=Pint; J=Jar; B=Tedlar; G=Glass; M=Metal; M=Metal; C=Can

White=Laboratory Copy

Yellow=Customer's Copy

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 12, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Dilution was necessary for some samples due to matrix interference. Samples were analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Samples were reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Analytical Comments for EPA 6010B_Dissolved:

Matrix Spike Duplicate (MSD) is outside recovery criteria for Iron in QC samples N051585-001CMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Manganese in QC samples N051585-001CMS and N051585-001CMSD since the analyte concentration in the sample is disproportionate to the spike level. Post Spike (PS) passed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N051585-001DMS and N051585-001DMSD at 1x dilution possibly due to matrix interference. QC samples were diluted and recovery passed criteria. Thus sample reference N051585-001 and MS/MSD were reported at 5x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Matrix Spike (MS) is outside recovery criteria in QC sample N051569-015CMS at lower dilution possibly due to matrix interference. QC sample was diluted and recovery passed criteria. Thus sample reference N051569-015 and MS/MSD were reported at 5x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

% RSD of N051585-005 at 1x dilution failed possibly due to matrix. Sample at 5x dilution was analyzed for several runs and result is comparable thus, sample was reported at 5x dilution.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [X] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
   Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
6. Trip Blanks and Equipment Blanks are billable sample.
8. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	7/12/2022	Workorder:	N051585
Rep sample Temp (Deg C):	1.1/1.4	IR Gun ID:	3

Temp Blank: ☑ Yes ☐ No

Carrier name: ASSET

Last 4 digits of Tracking No.: NA Packing Material Used: None

Cooling process: ☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

RE: PG&E Topock - RCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 13, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (37 ug/L) and hexavalent chromium (0 ug/L) for sample N051608-001 (MW-67-185-0722) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Dilution was necessary due to matrix. Samples are colored.

Analytical Comments for EPA 300.0:

Dilution was necessary due to matrix. Sample is colored.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (37 ug/L) and hexavalent chromium (0 ug/L) for sample N051608-001 (MW-67-185-0722) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 43 and 30 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Dilution was necessary due to matrix. Samples are colored.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [x] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	7/13/2022	Workorder:	N051608
Rep sample Temp (Deg C):	2.9	IR Gun ID:	3

Temp Blank: ☑ Yes ☐ No

Carrier name: ASSET

Last 4 digits of Tracking No.: NA Packing Material Used: None

Cooling process: ☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 13, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

Lab Order: N051609

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 300:

Dilution was necessary for sample N051609-001B due to precipitation upon addition of eluent.

Analytical Comments for EPA 6010B:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Iron in QC samples N051609-001C-MS and N051609-001C-MSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Arsenic in QC samples N051609-002C-MS and N051609-002C-MSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N051585-001DMS and N051585-001DMSD at 1x dilution possibly due to matrix interference. QC samples were diluted and recovery passed criteria. Thus sample reference N051585-001 and MS/MSD were reported at 5x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [X] C = 2 Workdays
- [ ] D = 3 Workdays
- [ ] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 13, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

Lab Order: N051615

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Dilution was necessary for sample N051615-006 due to matrix interference. Sample was analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Sample was reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Analytical Comments for SM 5310C:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N051611-002DMS and N051611-002DMSD at several dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N051611-002D and MS/MSD were reported at 20x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

CHAIN OF CUSTODY RECORD

Page 1 of 1

| | | |

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	7/13/2022	Workorder:	N051615
Rep sample Temp (Deg C):	2.1/2.9	IR Gun ID:	3
Temp Blank:	☑ Yes ☐ No		
Carrier name:	ASSET		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

Workorder No.: N051617

RE: PG&E Topock - OMM TCS PWTF, 30106892

Attention: Brian Prowd

Enclosed are the results for sample(s) received on July 13, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 6020_Total:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Chromium in QC samples N051617-001C-MS and N051617-001C-MSD since the analyte concentration in the sample is disproportionate to the spike level. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [x] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs =200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Turns are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of reports needed.
9. For subcontract analysis, TAT and Surcharges will vary.

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 14, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for

Nancy Sibucao
Laboratory Director

Lab Order: N051634

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for SM 5310C:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N051611-002DMS and N051611-002DMSD at several dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N051611-002D and MS/MSD were reported at 20x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [X] C = 2 Workdays
- [ ] D = 3 Workdays
- [ ] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs =200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on July 14, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6:

Dilution was necessary for sample N051635-003 due to matrix interference. Sample was analyzed at lower dilution however matrix spike recovery and retention time criteria were not met indicating possible matrix interference. Sample was reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for some analytes in QC samples N051727-002D-MS and N051727-002D-MSD since the analyte concentration in the sample is disproportionate to the spike level. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria in QC samples N051651-004DMS and N051651-004DMSD at lower dilution possibly due to matrix interference. QC samples were diluted and recovery passed criteria. Thus sample reference N051651-004 and MS/MSD were reported at 5x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [X] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on August 08, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Ammonia was subcontracted to BC Labs- Bakersfield,CA.

Analytical Comments for EPA 218.6:

Dilution was necessary for some samples due to matrix interference. Samples were analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Samples were reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Analytical Comments for EPA 6010B_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Iron in QC samples N052034-009CMS and N052034-009CMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for some analytes in QC samples N052034-009CMS, N052034-009CMSD and N052058-010CMS possibly due to matrix interference. Post Spike (PS) passed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) is outside recovery criteria in QC sample N052034-009DMS at lower dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N052034-009 and MS/MSD were reported at 50x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [x] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

CC: "maryann.balilu@assetlaboratoriesph.com" <maryann.balilu@assetlaboratoriesph.com>, Tina Rice <Tina.Rice@critigen.com>

Hi Yoandra,
The labels are correct and the Sample IDs should be “Q322”. Today’s samples will have the same error. I’ll get the COCs changed for tomorrow, sorry about that.

Thanks!
Laura

Hi Laura,

Please, kindly confirm if sample IDs should be "0822" per COC or "Q322" per labels.

EB samples are correct.

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on August 09, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Ammonia was subcontracted to BC Labs- Bakersfield,CA.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Analytical Comments for EPA 6010B_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Iron in QC samples N052034-009CMS, N052034-009CMSD and N052065-001BMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for some analytes in QC samples N052034-009CMS, N052034-009CMSD, N052058-010CMS, N052065-001BMS and N052065-001BMSD possibly due to matrix interference. Post Spike (PS) passed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) is outside recovery criteria in QC sample N052034-009DMS at lower dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N052034-009 and MS/MSD were reported at 50x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Matrix Spike (MS) is outside recovery criteria in QC sample N052282-007CMS at lower dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N052282-007 and MS/MSD were reported at 50x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

CLIENT:	ARCADIS U.S., Inc. - California	**Client Sample ID:**	TW-02D-Q322
Lab Order:	N052058	**Collection Date:**	8/9/2022 8:35:00 AM
Project:	PG&E Topock - PCM, 30121866.3Q22GW	**Matrix:**	GROUNDWATER
Lab ID:	N052058-001		

Analyses	Result	MDL	PQL	Qual	Units	DF	Date Analyzed
HEXAVALENT CHROMIUM BY IC							
			EPA 218.6				
RunID: **NV00922-IC7_220810A**	QC Batch: **R164784**			PrepDate:			Analyst: **RAB**
Hexavalent Chromium	200	1.3	10		µg/L	50	8/10/2022 09:24 PM
DISSOLVED METALS BY ICP-MS							
		EPA 3010A	**EPA 6020**				
RunID: **NV00922-ICP8_220813B**	QC Batch: **94191**			PrepDate:	**8/11/2022**		Analyst: **DJ**
Chromium	210	0.18	5.0		µg/L	5	8/13/2022 06:43 PM

Qualifiers:

B	Analyte detected in the associated Method Blank	E	Value above quantitation range
H	Holding times for preparation or analysis exceeded	ND	Not Detected at the Reporting Limit
S	Spike/Surrogate outside of limits due to matrix interference		Results are wet unless otherwise specified
DO	Surrogate Diluted Out		

CLIENT:	ARCADIS U.S., Inc. - California	**Client Sample ID:**	TW-02S-Q322
Lab Order:	N052058	**Collection Date:**	8/9/2022 8:04:00 AM
Project:	PG&E Topock - PCM, 30121866.3Q22GW	**Matrix:**	GROUNDWATER

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [X] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable samples.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	8/9/2022	Workorder:	N052058
Rep sample Temp (Deg C):	2.6/3.6	IR Gun ID:	3

Temp Blank: ☑ Yes ☐ No

Carrier name: ASSET

Last 4 digits of Tracking No.: NA Packing Material Used: None

Cooling process: ☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on August 10, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

CLIENT: ARCADIS U.S., Inc. - California
Project: PG&E Topock - PCM, 30121866.3Q22GW
Lab Order: N052065

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Ammonia and Nitrate/Nitrite as N were subcontracted to BC Labs - Bakersfield, CA.

Analytical Comments for EPA 218.6:

Dilution was necessary for some samples due to matrix interference. Samples were analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Samples were reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Nitrite in QC samples N052065-008BMS and N052065-008BMSD possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for SM 5310C:

Matrix Spike (MS) is outside recovery criteria in QC sample N052034-009DMS at lower dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N052034-009 and MS/MSD were reported at 50x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Matrix Spike (MS) is outside recovery criteria in QC sample N052065-001CMS at lower dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N052065-001 and MS/MSD were reported at 10x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytiacal Comments for EPA 6010B:

Matrix Spike Duplicate (MSD) is outside recovery criteria for Iron in QC sample N052065-001BMSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020:

Matrix Spike (MS) is outside recovery criteria for Barium and Selenium in QC samples N052065-001BMS and N052065-001BMSD possibly due to matrix interference. Post Spike passed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [x] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
   Less than 24 Hrs. =200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary

Hi,

For Sample 15 (MW-36-100-Q322) that is correct, we need nitrate by 300, nitrate/nitrite as nitrogen by SM4500. No ammonia needed for this sample.

Thanks,

Laura

Noted Laura,

What about sample 15 (MW-36-100-Q322)? Nitrate/Nitrite by 4500 and Nitrate by 300? No Ammonia?

Thanks Laura!

Another question please, just for confirmation. The request for Ammonia and Nitrate/Nitrite is correct?

I'm asking because the bottles are labelled Nitrate/Nitrite.

Thanks,

On 8/11/2022 2:58 PM, Madsen, Laura wrote:

Hello,

Sample 9: Collection time is 13:40 is correct

- Sample 14: Collection time is 10:21 is correct

Thanks!

Hi Laura,

Please, advise on the following discrepancies for the attached COC:

- Sample 9: Collection time is 13:40 on COC and 12:40 on labels

- Sample 14: Collection time is 10:20 on COC and 10:21 on labels

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on August 11, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Ammonia and Nitrate/Nitrite as N were subcontracted to BC Labs - Bakersfield, CA.

Analytical Comments for EPA 218.6:

Dilution was necessary for some samples due to matrix interference. Samples were analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Samples were reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of samples upon the addition of eluent.

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Nitrite in QC samples N052083-013DMS and N052083-013DMSD possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Arsenic and Molybdenum in QC samples N052083-005B-MS and N052083-005B-MSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable

Turn Around Time (TAT)

- [ ] A = < 24 Hrs or Same Day TAT
- [ ] B = Next Workday
- [ ] C = 2 Workdays
- [ ] D = 3 Workdays
- [X] E = Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms

1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analysis
   Less than 24 Hrs =200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

Turn Around Time (TAT)

	A	< 24 Hrs or Same Day TAT
	B	= Next Workday
	C	= 2 Workdays
	D	= 3 Workdays
X	E	= Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 6-7 business days, surcharges will apply for rush analysis.
Less than 24 Hrs =200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

Preservatives:				Container Type:		
H=HCL	N=HNO_3	S=H_2SO_4	C=4°C	T=Tube	V=VOA	P=Pint
Z=$Zn(AC)_2$	O=NaOH	T=$Na_2S_2O_3$		J=Jar	B=Tedlar	G=Glass
Others/Specify:	B (NH4)2SO4/NH4OH			M=Metal	M=Metal	C=Can

White=Laboratory Copy
Yellow=Customer's Copy

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	8/11/2022	Workorder:	N052083
Rep sample Temp (Deg C):	2.4/1.1	IR Gun ID:	3

Temp Blank: ☑ Yes ☐ No

Carrier name: ASSET

Last 4 digits of Tracking No.: NA Packing Material Used: None

Cooling process: ☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on August 12, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Ammonia and Nitrate/Nitrite were subcontracted to BC Labs - Bakersfield, CA.

Analytical Comments for EPA 218.6:

Because the results for total dissolved chromium (5.8 ug/L) and hexavalent chromium (0 ug/L) for sample N052098-001 (MW-21-Q322) are discrepant, sample re-analysis and Matrix Spike protocol were performed and result confirmed initial analysis.

Dilution was necessary for some samples due to matrix interference. Samples were analyzed at lower dilution however matrix spike recovery and/or retention time criteria were not met indicating possible matrix interference. Samples were reported at dilution that meets matrix spike recovery limit and the detected peak within retention time window.

Analytical Comments for EPA 300.0:

Dilution was necessary due to precipitation of sample upon the addition of eluent.

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Nitrite in QC samples N052083-013DMS and N052083-013DMSD possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (5.8 ug/L) and hexavalent chromium (0 ug/L) for sample N052098-001 (MW-21-Q322) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 7.2 and 3.1 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Arsenic and Molybdenum in QC samples N052083-005B-MS and N052083-005B-MSD possibly due to matrix interference. Post Spike (PS) and Dilution Test (DT) were performed however, PS failed acceptance criteria. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Turn Around Time (TAT)

	A	< 24 Hrs or Same Day TAT
	B	= Next Workday
	C	= 2 Workdays
	D	= 3 Workdays
X	E	= Routine 5-7 Workdays

TAT Starts at 8 AM the following day if samples received after 3:00PM.

Special Instruction:

Terms
1. All samples will be disposed in 45 days and records will be destroyed in 5 years upon submission of final report.
2. Regular TAT is 5-7 business days, surcharges will apply for rush analyses
Less than 24 Hrs.=200% Next Day=100% 2 Workdays=50% 3 Workdays=35 % 4 Workdays=20%
3. Custom EDD formats will be an additional 3% of the total project price.
4. Add 10% surcharge for Level III Data Packages, 15% for Level IV Data Packages. Surcharge applied on total project price.
5. Trip Blanks and Equipment Blanks are billable sample.
6. Asset Laboratories is not responsible for samples collected using incorrect methodology.
7. Terms are net 30 days.
8. All reports are submitted in electronic format. Please inform ASSET Laboratories if hard copy of report is needed.
9. For subcontract analysis, TAT and Surcharges will vary.

ASSET Laboratories

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On:	8/12/2022	Workorder:	N052098
Rep sample Temp (Deg C):	4.3	IR Gun ID:	3
Temp Blank:	☑ Yes ☐ No		
Carrier name:	ASSET		
Last 4 digits of Tracking No.:	NA	Packing Material Used:	None
Cooling process:	☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None		

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☑	No ☐	NA ☐
15. Did the bottle labels indicate correct preservatives used?	Yes ☑	No ☐	NA ☐
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

RE: PG&E Topock - PCM, 30121866.3Q22GW

Attention: Dan Bush

Enclosed are the results for sample(s) received on August 15, 2022 by ASSET Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for

Nancy Sibucao
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and ASSET Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

All sample containers were received intact with proper chain of custody documentation.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Samples were analyzed within method holding time.

Analytical Comments for SM 5310C:

Matrix Spike (MS) is outside recovery criteria in QC sample N052065-001CMS at lower dilutions possibly due to matrix interference. QC samples were further diluted and recovery passed criteria. Thus sample reference N052065-001 and MS/MSD were reported at 10x dilution. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Client ID: **PBW** Batch ID: **94305** TestNo: **EPA 6020** **EPA 3010A** Analysis Date: **8/18/2022** SeqNo: **4788698**

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Arsenic	ND	0.10									
Barium	ND	1.0									
Manganese	ND	0.50									

Sample ID: **LCS-94305** SampType: **LCS** TestCode: **6020_DIS_TP** Units: **µg/L** Prep Date: **8/18/2022** RunNo: **164980**
Client ID: **LCSW** Batch ID: **94305** TestNo: **EPA 6020** **EPA 3010A** Analysis Date: **8/18/2022** SeqNo: **4788699**

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Arsenic	9.491	0.10	10.00	0	94.9	85	115				
Barium	10.288	1.0	10.00	0	103	85	115				
Manganese	97.090	0.50	100.0	0	97.1	85	115				

Sample ID: **N052126-001B-MS** SampType: **MS** TestCode: **6020_DIS_TP** Units: **µg/L** Prep Date: **8/18/2022** RunNo: **164980**
Client ID: **ZZZZZZ** Batch ID: **94305** TestNo: **EPA 6020** **EPA 3010A** Analysis Date: **8/18/2022** SeqNo: **4788705**

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Arsenic	8.148	0.10	10.00	0	81.5	75	125				
Barium	38.598	1.0	10.00	28.96	96.3	75	125				
Manganese	102.992	0.50	100.0	13.36	89.6	75	125				

Sample ID: **N052126-001B-MSD** SampType: **MSD** TestCode: **6020_DIS_TP** Units: **µg/L** Prep Date: **8/18/2022** RunNo: **164980**
Client ID: **ZZZZZZ** Batch ID: **94305** TestNo: **EPA 6020** **EPA 3010A** Analysis Date: **8/18/2022** SeqNo: **4788709**

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Arsenic	8.226	0.10	10.00	0	82.3	75	125	8.148	0.956	20	
Barium	38.043	1.0	10.00	28.96	90.8	75	125	38.60	1.45	20	
Manganese	103.836	0.50	100.0	13.36	90.5	75	125	103.0	0.817	20	

Qualifiers:

B Analyte detected in the associated Method Blank
ND Not Detected at the Reporting Limit
DO Surrogate Diluted Out
E Value above quantitation range
R RPD outside accepted recovery limits
Calculations are based on raw values
H Holding times for preparation or analysis exceeded
S Spike/Surrogate outside of limits due to matrix interference
