Abbreviations:
-- = not applicable
mg/kg = milligrams per kilogram
ug/kg = micrograms per kilogram
J = estimated value
U = not detected at specified reporting limit
UJ = not detected at specified reporting limit; reporting limit
AOC = area of concern
BHC = benzene hexachloride
DDD = Dichlorodiphenyldichloroethane
DDE = Dichlorodiphenyldichloroethylene
DDT = Dichlorodiphenyltrichloroethane
TPH = total petroleum hydrocarbon
PAH = polycyclic aromatic hydrocarbon
PCB = polychlorinated biphenyls

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Polychlorinated Biphenyls				
Total PCBs	8.7E-13	1.1E-09	8.6E-13	1.1E-09
Total Petroleum Hydrocarbons				
TPH as diesel	NC	NC	NC	NC
TPH as motor oil	NC	NC	NC	NC
Dioxins/Furans				
TEQ Human	1.8E-16	7.1E-14	2.0E-16	7.1E-14

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is not complete for the tribal user. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
ILCR = Incremental Lifetime Cancer Risk.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
ILCR = Incremental Lifetime Cancer Risk.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

MODIFIED VERSION OF USEPA ADULT LEAD MODEL

CALCULATIONS OF BLOOD LEAD CONCENTRATIONS (PbBs) AND PRELIMINARY REMEDIATION GOAL (PRG)

EDIT RED CELL

Variable	Description of Variable	Units	0-0.5 feet below ground surface	0-3 feet below ground surface
PbS	Soil lead concentration	ug/g or ppm	28.9	38.1
$R_{fetal/maternal}$	Fetal/maternal PbB ratio	--	0.9	0.9
BKSF	Biokinetic Slope Factor	ug/dL per ug/day	0.4	0.4
GSD_i	Geometric standard deviation PbB	--	1.8	1.8
PbB_0	Baseline PbB	ug/dL	0.0	0.0
IR_S	Soil ingestion rate (including soil-derived indoor dust)	g/day	0.05	0.05
$AF_{S,D}$	Absorption fraction (same for soil and dust)	--	0.12	0.12
$EF_{S,D}$	Exposure frequency (same for soil and dust)	days/yr	8	8
$AT_{S,D}$	Averaging time (same for soil and dust)	days/yr	365	365
PbB_{adult}	**PbB of adult worker, geometric mean**	**ug/dL**	**0.002**	**0.002**
$PbB_{fetal,0.90}$	90th percentile PbB among fetuses of adult workers	ug/dL	0.003	0.004
PbB_t	Target PbB level of concern (e.g., 10 ug/dL)	ug/dL	**1.0**	**1.0**
$P(PbB_{fetal} > PbB_t)$	**Probability that fetal PbB > PbB_t, assuming lognormal distribution**	**%**	**0%**	**0%**

PRG90 **9942**

Notes:

Highlighted values are site-specific: soil ingestion rate of 50 mg/day is the default incidental soil ingestion rate evaluation of exposure to lead in soil (USEPA 2003). Exposure frequency (8 days/year) based on the assumption of 8 days per month, 1 month per year as shown in Table 5.1 of the main report.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
bgs = below ground surface.
CDI = Chronic Daily Intake.
COPC = Constituent of Potential Concern.
EC = Exposure Concentration.
mg/kg-day = milligrams per kilogram per day.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
ILCR = Incremental Lifetime Cancer Risk.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
ILCR = Incremental Lifetime Cancer Risk.
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
NC = Not considered a carcinogen.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using the United States Environmental Protection Agency (USEPA) Adult Lead Model (ALM). Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:
[a] EPCs for exposure to subsurface II soil (0 to 10 feet bgs) are used to evaluate the vapor inhalation pathway.

Abbreviations:
-- = not calculated.
bgs = below ground surface.
COPC = Constituent of Potential Concern.
HI = Hazard Index
mg/m^3 = milligrams per cubic meter.
na = Not applicable. Potential exposure to lead is evaluated using California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control's (DTSC) LeadSpread model. Please see text for discussion.
NA = Not applicable. Hexavalent chromium is not absorbed via dermal contact.
ND = Not detected.
NS = Not sampled.
NV = Not volatile.
PCB = Polychlorinated biphenyls.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

PRG90 **994**

Notes:
Highlighted values are site-specific: soil ingestion rate (100 mg/day) consistent with United States Environmental Protection Agency (USEPA) recommendations for evaluating construction (i.e., soil contact-intensive) scenarios (USEPA 2016). Exposure frequency (40 days/year) is a site-specific value for short-term maintenance workers as shown in Table 5.1 of the main report.

Table OCS-C Table Notes
Notes for Terrestrial Wildlife Risk Calculations

Soil Human Health and Ecological Risk Assessment
PG&E Topock Compressor Station
Needles, California

Notes:

[a] Dioxin presented in ng/kg.

[b] Total dose equation is presented below:

Total Dose (mg/kg-day) = $[(EPC_{soil} \times SIR) + (C_{plants} \times FIR \times F_{plants}) + (C_{insects} \times FIR \times F_{insects}) + (C_{mammals} \times FIR \times F_{mammals})] \times SUF$

[c] HQ = Total Dose / TRV

Abbreviations:

AOC = area of concern
BTAG = Biological Technical Assistance Group
COPEC = constituent of potential ecological concern
dw = dry weight
EPC_{soil} = exposure point concentration in soil (mg/kg dw)
EPC_{plants} = exposure point concentration in plants (mg/kg dw)
$EPC_{insects}$ = exposure point concentration in insects (mg/kg dw)
$EPC_{mammals}$ = exposure point concentration in mammals (mg/kg dw)
F_{plants} = fraction of plants in diet
$F_{insects}$ = fraction of insects in diet
$F_{mammals}$ = fraction of mammals in diet
FIR = food ingestion rate (kg dw/kg bw-day)
HQ = hazard quotient (unitless)
kg = kilogram
kg dw/kg bw-day = kilograms per kilogram of body weight per day
LOAEL = lowest observed adverse effect level (mg/kg-day)
m = maximum detected concentration
mg/kg = milligrams per kilogram
mg/kg-day = milligrams per kilogram per day
ND = not detected
ng/kg = nanograms per kilogram
NOAEL = no observed adverse effect level (mg/kg-day)
SIR = soil ingestion rate (kg dw/kg bw-day)
SUF = site use factor (fraction)
TRV = toxicity reference value (mg/kg-day)
OCS = Outside Compressor Station

Notes:

[a] Calculated using selected soil EPC and uptake model. See Section 6 of the main report.

[b] Biota EPCs equal to 0.0 indicate no bioaccumulation from soil.

Bold indicates EPC selected to estimate plant uptake from soil (maximum of surface, shallow, and subsurface l soil).

Abbreviations:

-- = soil EPC or uptake model not available, biota EPCs could not be estimated.
AOC = area of concern
EPC = exposure point concentration
ft bgs = feet below ground surface
m = maximum depth-weighted concentration
mg/kg = milligrams per kilogram
nd = not detected in this depth interval
ng/kg = nanograms per kilogram
OCS = Outside Compressor Station

Notes:

	NOAEL HQ greater than 1
	LOAEL HQ greater than 1
	LOAEL HQ greater than 10
	LOAEL HQ greater than 100

Abbreviations:

-- = no toxicity value available, HQs could not be estimated
AOC = area of concern
BTAG = Biological Technical Assistance Group
HQ = hazard quotient
LOAEL = lowest observed adverse effect level
NOAEL = no-observed adverse effect level
OCS = Outside Compressor Station
PCBs = polychlorinated biphenyls
PAH = polycyclic aromatic hydrocarbons
SUF = site use factor
TRV = toxicity reference value

Table OCS-D Table Notes
Notes for Terrestrial Wildlife Risk Calculations

Soil Human Health and Ecological Risk Assessment
PG&E Topock Compressor Station
Needles, California

Notes:

[a] Dioxin presented in ng/kg.

[b] Total dose equation is presented below:

Total Dose (mg/kg-day) = $[(EPC_{soil} \times SIR) + (C_{plants} \times FIR \times F_{plants}) + (C_{insects} \times FIR \times F_{insects}) + (C_{mammals} \times FIR \times F_{mammals})] \times SUF$

[c] HQ = Total Dose / TRV

Abbreviations:

AOC = area of concern
BTAG = Biological Technical Assistance Group
COPEC = constituent of potential ecological concern
dw = dry weight
EPC_{soil} = exposure point concentration in soil (mg/kg dw)
EPC_{plants} = exposure point concentration in plants (mg/kg dw)
$EPC_{insects}$ = exposure point concentration in insects (mg/kg dw)
$EPC_{mammals}$ = exposure point concentration in mammals (mg/kg dw)
F_{plants} = fraction of plants in diet
$F_{insects}$ = fraction of insects in diet
$F_{mammals}$ = fraction of mammals in diet
FIR = food ingestion rate (kg dw/kg bw-day)
HQ = hazard quotient (unitless)
kg = kilogram
kg dw/kg bw-day = kilograms per kilogram of body weight per day
LOAEL = lowest observed adverse effect level (mg/kg-day)
m = maximum detected concentration
mg/kg = milligrams per kilogram
mg/kg-day = milligrams per kilogram per day
ND = not detected
ng/kg = nanograms per kilogram
NOAEL = no observed adverse effect level (mg/kg-day)
OCS = Outside Compressor Station
SIR = soil ingestion rate (kg dw/kg bw-day)
SUF = site use factor (fraction)
TRV = toxicity reference value (mg/kg-day)

1 INTRODUCTION

This appendix presents the human health and ecological risk assessment (HHERA) for the combined areas of concern (AOCs) potential soil exposure area located outside the Topock Compressor Station (TCS) in Needles, California, excluding Bat Cave Wash (BCW). The AOCs evaluated in this appendix consist of combined AOCs 4, 9, 10, 11, 12, 14, 27, 28 (a, b, c), 31, and Undesignated Area (UA) 2. This combination of AOCs outside the compressor station (OCS) excluding BCW comprises the potential exposure area evaluated in this appendix. This potential exposure area will be referred to as the OCSxBCW potential exposure area.

The OCSxBCW potential exposure area is shown on Figure OCSxBCW-1.1, is approximately 20 acres in total, and includes sample locations shown in Table OCSxBCW-1.1. Per the final Human Health and Ecological Risk Assessment Work Plan (RAWP) documents (Arcadis U.S., Inc. [Arcadis] 2008, 2009, 2015), the OCSxBCW potential exposure area was not identified as a potential exposure area for ecological receptors; therefore, an ecological risk assessment was not conducted for this appendix. Available soil data from the OCSxBCW potential exposure area were used to conduct a quantitative forward human health risk assessment (HHRA) as presented herein. A summary of the HHRA results are presented in Section 5 of the Soil Human Health and Ecological Risk Assessment Report for the TCS (the “main report”).

Descriptions of the physical location and characteristics of the OCS, which includes the BCW potential exposure area, and the HHRA methodologies are provided in the main report and the final RAWP documents (Arcadis 2008, 2009, 2015) and are not repeated in this appendix. Discussions of the historical uses and sampling and analysis are presented in the main report as well.

This appendix summarizes site use, data evaluation, potential receptors, potential exposure pathways, and the results of the HHRA risk characterization for soil in the OCSxBCW potential exposure area. Tables and figures specific to the OCSxBCW HHRA are also presented in this appendix.

1.1 Summary of Site Use

The summary of site use for the individual AOCs in the OCS potential exposure area is provided in Section 2 of the main report and the individual AOC/UA exposure area-specific appendices for AOCs 4, 9, 10, 11, 12, 14, 27, 28 (a, b, c), 31, and UA-2 and are not repeated in this appendix.

2 DATA EVALUATION AND COPC SELECTION

This section summarizes the data considered for the OCSxBCW HHRA and presents the constituents of potential concern (COPCs) for human health selected for this potential exposure area.

All soil sampling locations at the OCSxBCW potential exposure area are presented on Figure OCSxBCW-1.1 and in Table OCSxBCW-1.1. The data were evaluated based on the methodology described in the RAWP documents (Arcadis 2008, 2009, 2015) and in the main report. Details of the soil sampling and analysis will be presented in the forthcoming Remedial Facility Investigation/Remedial Investigation Report being prepared by Jacobs. For the baseline scenario, only soil data from 0 to 10 feet (ft) below ground surface (bgs) were included in the HHRA. Because potential soil contact does not extend below 10 ft bgs, deeper soil data (i.e., greater than 10 ft bgs) were excluded from the risk evaluation, as noted in Table OCSxBCW-1.1.

Following the steps outlined in Section 3 of the main report, soil data considered usable for the risk assessment were identified and used in the quantitative HHRA. All available soil data for the OCSxBCW potential exposure area are presented in Attachment OCSxBCW-A1, which includes samples collected from AOCs 4, 9, 10, 11, 12, 14, 27, 28 (a, b, c, d), 31, and UA-2. The soil data for these AOCs and their inclusion in the OCS potential exposure area are discussed in detailed in the OCS human health and ecological risk assessment (HHERA; Appendix OCS) and not repeated in this appendix.

For the OCSxBCW potential exposure area, soil data are available from 901 samples, of which soil data from 849 samples from 0 to 10 ft bgs were considered for use in the HHRA. Because potential soil contact does not extend below 10 ft bgs, deeper soil data (i.e., greater than 10 ft bgs) from 52 samples were excluded from the HHRA as noted in Table OCSxBCW-1.1.

Data processed for the HHRA (e.g., calculation of total concentrations for benzo[a]pyrene equivalent [B(a)PEQ], polychlorinated biphenyls [PCBs], and dioxin/furan toxicity equivalents [TEQ]) are described in detail in Section 3 of the main report.

The process for identifying COPCs included in the HHRA is detailed in Section 3.4 of the main report. COPCs selected for the OCS potential exposure area (Appendix OCS) were also selected as COPCs for the OCSxBCW potential exposure area to ensure that risk estimates for the two exposure areas are directly comparable. Soil data encompassing all relevant exposure depths for the HHRA (i.e., 0 to 10 ft bgs for all AOCs included in the OCSxBCW potential exposure area) are presented in Attachment OCSxBCW-A1. Metals, B(a)PEQ, and dioxin TEQ were above background levels in the OCS potential exposure area soil and, therefore, are conservatively included as COPCs in the baseline OCSxBCW HHRA. Carcinogenic polycyclic aromatic hydrocarbon (PAHs; i.e., benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[k]fluoranthene, dibenzo[a,h]anthracene, chrysene, and indeno[1,2,3-cd]pyrene) associated with B(a)PEQ are also selected as COPCs in the HHRA for the evaluation of the noncancer endpoint for each individual PAH. All other detected organic constituents in the OCSxBCW potential exposure area soil in the baseline scenario are included as COPCs in the HHRA. COPCs selected for exposure depths and scenarios evaluated in the OCSxBCW HHRA are summarized in Tables OCSxBCW-2.1a through OCSxBCW-2.1d. The selected COPCs are discussed further in Section 4.

3 EXPOSURE POINT CONCENTRATIONS

Depth-weighted and area-weighted exposure point concentrations (EPCs) for COPCs in soil at the OCSxBCW potential exposure area were calculated as described in Section 4.2 of the main report. For this exposure area, one scenario was evaluated: Baseline (no scouring).

The following exposure depths were evaluated:

1. Surface soil (0 to 0.5 ft bgs)
2. Shallow soil (0 to 3 ft bgs)
3. Subsurface I soil (0 to 6 ft bgs)
4. Subsurface II soil (0 to 10 ft bgs).

The scouring scenarios were evaluated for the AOC 10 potential exposure area in accordance with the RAWP (Arcadis 2008) and are presented in the individual AOC HHRA (Appendix AOC10). AOC 10 is only one component of the OCSxBCW potential exposure area, and those scouring scenarios were not repeated here for the OCSxBCW potential exposure area.

The depth-weighted data used in the calculation of depth-weighted EPCs are presented in Attachment OCSxBCW-A2. The summary statistics for the OCSxBCW potential exposure area soil depth-weighted datasets and depth-weighted EPCs were calculated consistent with the RAWP documents (Arcadis 2008, 2009, 2015). Per the RAWP (Arcadis 2008), area-weighted EPCs for the HHRA are evaluated only if depth-weighted EPCs suggest that cumulative cancer risks and/or noncancer hazards may be significant for any given HHRA exposure scenario (cumulative cancer risks exceed a 10^{-6} cancer risk level, and/or the noncancer hazard index [HI] exceeds 1). For the OCSxBCW potential exposure area, area-weighted EPCs were deemed necessary for the HHRA and, therefore, were evaluated. The area-weighted data used in the calculation of area-weighted EPCs are presented in Attachment OCSxBCW-A3.

If the soil dataset had fewer than four detected values (i.e., concentrations reported above the detection limit) or fewer than eight total observations, the EPC defaulted to the maximum depth-weighted concentration in that dataset.

Soil summary statistics for constituents measured at the OCSxBCW potential exposure area[1] and depth- and area-weighted EPCs for COPCs calculated using depth-weighted data from the four exposure depths listed above are presented in Table OCSxBCW-3.1. Table OCSxBCW-3.1 also presents the basis of the calculated depth- and area-weighted EPCs, including whether the EPC is based on the maximum detected concentration.

[1] The list of constituents shown in the Table OCSxBCW-3.1is based on analytes that were detected at least once at the site (including all exposure areas inside or outside the TCS) and measured at the OCSxBCW potential exposure area.

4 HUMAN HEALTH RISK ASSESSMENT

This section briefly summarizes the HHRA approach, presents the COPC, EPC, and risk and hazard summary tables, and discusses the results and conclusions of the risk characterization and uncertainties in the risk assessment for the OCSxBCW potential exposure area. Details of the overall HHRA approach are presented in Section 5 of the main report. Dose, exposure concentration (EC), risk, and hazard calculation tables for potential human health receptors at the OCSxBCW potential exposure area are presented in Attachments OCSxBCW-B1 and OCSxBCW-B2 for depth- and area-weighted EPCs, respectively.

As stated in the RAWP (Arcadis 2008), all potential exposure areas outside the TCS are assumed to be equally accessible for future human use for purposes of the HHRA; however, the BCW is being considered as a unique exposure area because wastewater was routinely discharged into this area. It is a known source of the groundwater plume and, therefore, is distinct from both a historical use and geographical perspective. The HHRA for the OCSxBCW potential exposure area provides additional perspective on the contribution of soil in BCW to the overall risk associated with the other exposure areas located outside the TCS

4.1 Human Health Conceptual Site Model

Following the steps outlined in Section 5.5 of the main report, risks were estimated for potentially complete and significant exposure pathways identified in the human health conceptual site model for receptors potentially exposed to COPCs in soil present at the OCSxBCW potential exposure area. These included:

- **Short- and Long-Term Maintenance Workers –** Incidental ingestion of soil, dermal contact with soil, inhalation of particulates and volatile organic compound (VOC) vapors in ambient outdoor air from soil
- **Recreational Users (child and/or adult camper, hiker, hunter, and off-highway vehicle [OHV] rider)** – Incidental ingestion of soil, dermal contact with soil, and inhalation of particulates and VOC vapors in ambient outdoor air from soil
- **Tribal Users** – Inhalation of particulates and VOC vapors in ambient outdoor air from soil.

Potential exposure pathways considered incomplete or insignificant were not quantitatively evaluated and are discussed in Section 5.3.1 of the main report.

4.2 Constituents of Potential Concern

As previously indicated, COPCs for the OCS potential exposure area (Appendix OCS) were also selected as COPCs for OCSxBCW potential exposure area to ensure that risk estimates for the two potential exposure areas are directly comparable. The COPCs for the OCS potential exposure area were selected in accordance with the RAWP (Arcadis 2008) and as described in Section 3.4 of the main report. The COPC selection process using soil data encompassing all relevant exposure depths for the HHERA (i.e., 0 to 10 ft bgs for the OCSxBCW potential exposure area) is presented in Attachment OCSxBCW-A.

COPCs for the four exposure depths and one scenario (baseline) evaluated for this HHRA are summarized in Table OCSxBCW-4.1(details are presented in Tables OCSxBCW-2.1a through OCSxBCW-2.1d).

COPCs included: metals (antimony, hexavalent chromium, total chromium, copper, lead, mercury, thallium, and zinc), inorganic compounds (cyanide, nitrate, and phosphate), VOCs (bromomethane, chloro methane, chloroform, isophorone, and methyl acetate), semi-volatile organic compounds (SVOCs; 4-methylphenol, bis [2-ethylhexyl] phthalate, and butylbenzylphthalate), PAHs, pesticides (4,4-dichlorodiphenyldichloroethylene, 4,4-dichlorodiphenyltrichloroethane, alpha-chlordane, dieldrin, and gamma-chlordane), PCBs, total petroleum hydrocarbon (TPH) as diesel, TPH as motor oil, and dioxin TEQ in surface, shallow, subsurface I, and/or subsurface II soil.

4.3 Exposure Point Concentration Summary

For the potentially complete and significant exposure pathways identified in the conceptual site model, EPCs were calculated as described in Section 4.2 of the main report and presented in Section 3 of this appendix. Depth-weighted data used in the calculation of depth- and area-weighted EPCs are presented in Attachment OCSxBCW-A. Depth-weighted EPCs for COPCs in soil and estimated outdoor air concentrations associated with dust used to estimate risk in the HHRA are summarized in Tables OCSxBCW-4.2a through OCSxBCW-4.2h for the four exposure depths evaluated in the baseline scenario.

Area-weighted EPCs for COPCs in soil and estimated outdoor air concentrations associated with dust used to estimate risk in the HHRA are summarized in Tables OCSxBCW-4.3a through OCSxBCW-4.3f for the four exposure depths evaluated in the baseline scenario.

As described in detail in Section 5.3.3 of the main report, the following exposure depths and corresponding EPC datasets were used to evaluate potential exposure to COPCs in soil for potential human receptors:

- **Short- and Long-Term Maintenance Workers** – surface, shallow, subsurface I and subsurface II soil
- **Recreational Users (child and/or adult camper, hiker, hunter, and OHV rider)** – surface and shallow soil
- **Tribal Users** – surface and shallow soil.

4.4 Estimation of Dose

The EC and chronic daily intake (CDI) for carcinogenic and noncarcinogenic effects were calculated, as described in Section 5.5.1 of the main report, for COPCs in soil for potentially complete exposure pathways. The calculated EC and CDI values using depth-weighted EPCs are presented in Tables OCSxBCW-B1.1a through OCSxBCW-B1.1g (carcinogenic effects) and Tables OCSxBCW-B1.2a through OCSxBCW-B1.2g (noncarcinogenic effects) for the potential receptors evaluated. The calculated EC and CDI values using area-weighted EPCs are presented in Tables OCSxBCW-B2.1a through OCSxBCW-B2.1e (carcinogenic effects) and OCSxBCW-B2.2a through OCSxBCW-B2.2e (noncarcinogenic effects) for the potential receptors evaluated.

Exposure parameters used in the dose calculations are presented in Table 5-1 of the main report.

4.5 Toxicity Assessment

The toxicity assessment characterizes the relationship between the magnitude of exposure to a constituent and the potential for adverse health effects. More specifically, the toxicity assessment identifies agency-promulgated or derived toxicity values that can be used to estimate the likelihood of adverse health effects occurring in humans at different exposure levels. The approach for the toxicity assessment was provided in Section 4.5 of the RAWP (Arcadis 2008) and in Section 4.2 of the RAWP Addendum 2 (Arcadis 2015). Consistent with regulatory risk assessment policy, adverse health effects resulting from potential chemical exposures are evaluated in two categories: carcinogenic effects and noncarcinogenic effects. The hierarchy of sources for the toxicity criteria to be used for the HHRA generally corresponds to the California Department of Toxic Substances Control (DTSC) guidance (2015). Toxicity values for carcinogenic and noncarcinogenic effects for COPCs selected and used for the HHRA are described in Section 5.4 of the main report and were used to estimate potential cancer risks and noncancer hazards.

4.6 Human Health Risk Characterization

For potential human receptors assuming lifetime soil exposure is limited to the OCSxBCW potential exposure area, the estimated incremental lifetime cancer risks (ILCRs) and/or noncancer hazard quotients (HQs) were calculated for each COPC and potentially complete exposure pathway. Cumulative ILCRs (i.e., sum of chemical-specific ILCRs for each exposure depth for a scenario) were calculated and compared to the DTSC point of departure for risk management decision of 1×10^{-6}. Risk management decisions may raise this criterion depending on site-specific conditions. As indicated in the National Oil and Hazardous Substances Pollution Contingency Plan (40 Code of Federal Regulations 300), cancer risks between one in a million and one hundred in a million probability of occurrence (1×10^{-6} and 1×10^{-4}) fall within a risk management range. This is generally referred to as the acceptable risk range. Within this estimated cancer risk range, there is flexibility for risk managers in deciding what action, if any, is necessary and appropriate for the protection of human health. Cumulative noncancer hazards (i.e., HIs) are calculated and compared to an HI of 1 (DTSC 2015). Chemical exposures that yield HIs of less than or equal to 1 are not expected to result in adverse noncancer health effects (United States Environmental Protection Agency [USEPA] 1989).

4.6.1 Risk Characterization for Exposure to Soil (Baseline Scenario and Depth-Weighted EPCs)

Table OCSxBCW-4.4 summarizes cumulative ILCRs and HIs estimated for exposure to soil for each potential human receptor at the OCSxBCW potential exposure area in the baseline scenario, calculated using depth-weighted EPCs. The dose, EC, ILCR, and HI equations are presented in detail in Section 5.5.1 of the main report. The detailed cancer risk estimates (Tables OCSxBCW-B1.3a through OCSxBCW-B1.3g) and noncancer hazard calculations (Tables OCSxBCW-B1.4a through OCSxBCW-B1.4g) are presented in Attachment OCSxBCW-B1.

Risk and hazard estimates for the baseline scenario are summarized in the tables and discussed below. Assuming that lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated cumulative ILCRs and HIs for the hunter and tribal user exposed to COPCs in soil at all exposure depths are below 1×10^{-6} and 1, respectively. HI estimates are also below 1 for all other potential receptors. The estimated cumulative ILCRs for the OCSxBCW potential exposure area soil contact are above *de minimis* levels but within the acceptable risk management range for short- and long-term maintenance workers and certain recreational users (i.e., camper, hiker, and OHV rider).

Maintenance Workers

Baseline Depth-Weighted Estimated Cumulative Incremental Lifetime Cancer Risk and Hazard Index					
Potential Receptor and Exposure Depth		OCSxBCW Potential Exposure Area			
		Cumulative ILCR	ILCR Drivers	HI	HI Drivers
Short-Term Maintenance Worker	Surface	**4E-06**	CrVI (4E-06)	0.2	NA
	Shallow	**3E-06**	CrVI (3E-06)	0.2	NA
	Subsurface I	**2E-06**	CrVI (1E-06)	0.2	NA
	Subsurface II	1E-06	NA	0.1	NA
Long-Term Maintenance Worker	Surface	**3E-05**	CrVI (3E-05) TEQ human (1E-06)	0.06	NA
	Shallow	**2E-05**	CrVI (2E-05) TEQ human (1E-06)	0.07	NA
	Subsurface I	**1E-05**	CrVI (1E-05) TEQ human (1E-06)	0.07	NA
	Subsurface II	**9E-06**	CrVI (7E-06) TEQ human (1E-06)	0.06	NA

Notes:
CrVI = hexavalent chromium
NA = Not applicable. ILCR and HI drivers are presented only for estimated cumulative ILCRs above 1×10^{-6} and estimated HIs above 1.
TEQ human = dioxin toxicity equivalents for humans

Assuming that lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated cumulative ILCRs for the short-term maintenance worker potentially exposed to COPCs in subsurface II soil are at or below 1×10^{-6}, the point of departure for risk management decisions (Table OCSxBCW-B1.3a). However, the depth-weighted estimated cumulative ILCRs for the short-term maintenance worker potentially exposed to COPCs in surface, shallow, and subsurface I soil are above the point of departure for risk management decisions of 1×10^{-6}, but well within the risk management range of 1×10^{-6} and 1×10^{-4}. For this receptor, risk estimates above *de minimis* levels were primarily attributed to hexavalent chromium in soil via the soil ingestion and inhalation of particulates pathways (Table OCSxBCW-B1.3a).

Assuming that lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated cumulative ILCRs for the long-term maintenance worker potentially exposed to COPCs in surface, shallow, subsurface I and subsurface II soil are above the point of departure for risk management decisions of 1×10^{-6}, but within the risk management range of 1×10^{-6}

and 1×10^{-4}. For this receptor, risk estimates above *de minimis* levels were primarily attributed to dioxin TEQ in soil via the dermal contact and soil ingestion pathways and to hexavalent chromium in soil via the inhalation of particulates pathway (Table OCSxBCW-B1.3b).

Elevated concentrations of hexavalent chromium appear to be localized at location AOC10-20 (see Figure OCSxBCW-1.1a). Accordingly, the depth-weighted EPCs and corresponding estimated ILCRs for hexavalent chromium may be biased high. To reduce the uncertainty associated with this potential bias, area-weighted cumulative ILCRs for the short- and long-term maintenance workers were estimated, as discussed below in Section 4.6.2.

Assuming that lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated cumulative HIs for the short- and long-term maintenance workers (Table OCSxBCW-B1.4a and Table OCSxBCW-B1.4b, respectively) potentially exposed to COPCs in surface, shallow, subsurface I, and subsurface II soil are below an HI of 1.

The depth-weighted EPCs for lead in surface shallow, subsurface I, and subsurface II soil are not expected to result in an increase in blood lead levels above the California Office of Environmental Health Hazard Assessment (OEHHA) benchmark value of 1 microgram per deciliter (μg/dL) in the fetus of a short- or long-term maintenance worker (Table OCSxBCW-B1.5a and Table OCSxBCW-B1.5b, respectively).

Recreational Users

Baseline Depth-Weighted Estimated Cumulative Incremental Lifetime Cancer Risk and Hazard Index					
Potential Receptor and Exposure Depth		OCSxBCW Potential Exposure Area			
		Cumulative ILCR	ILCR Drivers	HI	HI Drivers
Camper	Surface	**4E-06**	CrVI (4E-06) TEQ human (4E-07)	0.07	NA
	Shallow	**3E-06**	CrVI (3E-06) TEQ human (5E-07)	0.09	NA
Hiker	Surface	**9E-06**	CrVI (8E-06) TEQ human (9E-07)	0.1	NA
	Shallow	**6E-06**	CrVI (5E-06) TEQ human (1E-06)	0.2	NA
Hunter	Surface	5E-07	NA	0.01	NA
	Shallow	4E-07	NA	0.01	NA
OHV Rider	Surface	**2E-05**	CrVI (2E-05) TEQ human (5E-07)	0.04	NA
	Shallow	**1E-05**	CrVI (1E-05) TEQ human (5E-07)	0.05	NA

Note:
ILCR and HI drivers are presented only for estimated cumulative ILCRs above 1×10^{-6} and estimated HIs above 1.

Assuming lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated cumulative ILCRs for the hunter potentially exposed to COPCs in surface and shallow soil (Tables OCSxBCW-B1.3e) are below 1×10^{-6}, the point of departure for risk management decisions. However, the depth-weighted estimated cumulative ILCRs for the camper, hiker, and OHV rider potentially exposed to COPCs in surface and shallow soil are above the point of departure for risk management decisions of 1×10^{-6}, but within the lower end of the risk management range of 1×10^{-6} and 1×10^{-4}. Risk estimates above *de minimis* levels were primarily attributed to hexavalent chromium, and dioxin TEQ in soil via the soil ingestion pathway for the camper and hiker (Tables OCSxBCW-B1.3d and OCSxBCW-B1.3e) and to dioxin TEQ via the soil ingestion pathway and hexavalent chromium via the inhalation of particulates pathway for the OHV rider (Table OCSxBCW-B1.3f).

As previously discussed, elevated concentrations of hexavalent chromium appear to be localized at location AOC10-20. Accordingly, the depth-weighted EPCs and corresponding estimated ILCRs for hexavalent chromium may be biased high. To reduce the uncertainty associated with this potential bias, area-weighted cumulative ILCRs for the camper, hiker, and OHV rider were estimated, as discussed below in Section 4.6.2.

Assuming lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated HIs for the camper, hiker, hunter and OHV rider (Tables OCSxBCW-B1.4c through OCSxBCW-B1.4f, respectively) potentially exposed to COPCs in surface and shallow soil are below an HI of 1. The depth-weighted EPCs for lead in surface and shallow soil are not expected to result in an increase in blood lead levels above the OEHHA benchmark value of 1 μg/dL for child recreational users and the fetus of a hunter (Tables OCSxBCW-B1.5c through OCSxBCW-B1.5i).

Tribal User

Baseline Depth-Weighted Estimated Cumulative Incremental Lifetime Cancer Risk and Hazard Index					
Potential Receptor and Exposure Depth		OCSxBCW Potential Exposure Area			
		Cumulative ILCR	ILCR Drivers	HI	HI Drivers
Tribal User	Surface	2E-08	NA	0.0004	NA
	Shallow	1E-08	NA	0.0004	NA

Note:
ILCR and HI drivers are presented only for estimated cumulative ILCRs above 1×10^{-6} and estimated HIs above 1.

Assuming lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the depth-weighted estimated cumulative ILCRs and HIs for the tribal user potentially exposed to COPCs in surface and shallow soil (Tables OCSxBCW-B1.3g and OCSxBCW-B1.4g, respectively) are below the *de minimis* levels of 1×10^{-6}, the point of departure for risk management decisions and HI of 1, respectively.

4.6.2 Risk Characterization for Exposure to Soil (Baseline Scenario and Area-Weighted EPCs)

Table OCSxBCW-4.5 summarizes cumulative ILCRs and HIs estimated for exposure to soil for each potential human receptor at the OCSxBCW potential exposure area, calculated using area-weighted EPCs, for potential receptors where the depth-weighted estimated cumulative ILCRs were above 1×10^{-6}. Accordingly, area-weighted ILCRs and HIs were estimated for short- and long-term maintenance workers and certain recreational users (i.e., camper, hiker and OHV rider). The dose, EC, ILCR, and HI equations are presented in detail in Section 5.5.1 of the main report. The detailed cancer risk estimates (Tables OCSxBCW-B2.3a through OCSxBCW-B2.3e) and noncancer hazard calculations (Tables OCSxBCW-B2.4a through OCSxBCW-B2.4e) are presented in Attachment OCSxBCW-B2.

The baseline scenario area-weighted estimated cumulative ILCRs and HIs for each receptor selected for evaluation are summarized in the tables and discussed below. In general, depending on the depth interval, the area-weighted approach resulted in risks or hazard estimates ranging from 1.2 to 2 times lower than the depth-weighted estimates.

Maintenance Workers

Baseline Area-Weighted Estimated Cumulative Incremental Lifetime Cancer Risk and Hazard Index					
Potential Receptor and Exposure Depth		OCSxBCW Potential Exposure Area			
		Cumulative ILCR	ILCR Drivers	HI	HI Drivers
Short-Term Maintenance Worker	Surface	**2E-06**	CrVI (2E-06)	0.39	NA
	Shallow	**2E-06**	CrVI (1E-06)	0.1	NA
	Subsurface I	1E-06	NA	0.1	NA
	Subsurface II	7E-07	NA	0.1	NA
Long-Term Maintenance Worker	Surface	**2E-05**	CrVI (2E-05) TEQ human (7E-07)	0.12	NA
	Shallow	**1E-05**	CrVI (1E-05) TEQ human (8E-07)	0.05	NA
	Subsurface I	**8E-06**	CrVI (7E-06) TEQ human (8E-07)	0.05	NA
	Subsurface II	**6E-06**	CrVI (5E-06) TEQ human (8E-07)	0.05	NA

Note:
ILCR and HI drivers are presented only for estimated cumulative ILCRs above 1×10^{-6} and estimated HIs above 1.

Assuming that lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the area-weighted estimated cumulative ILCRs for the short-term maintenance worker potentially exposed to COPCs in subsurface I, and subsurface II soil are at or below 1×10^{-6}, the point of departure for risk management decisions (Table OCSxBCW-B2.3a). However, the area-weighted estimated cumulative ILCR for the short-term maintenance worker potentially exposed to COPCs in surface and shallow soil is slightly above the point of departure for risk management decisions of 1×10^{-6}, but well within the risk management range of 1×10^{-6} and 1×10^{-4}. For this receptor, the risk estimate above the

de minimis level was primarily attributed to hexavalent chromium in soil via the soil ingestion and inhalation of particulates pathways (Table OCSxBCW-B2.3a).

Assuming lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the area-weighted estimated cumulative ILCRs for the long-term maintenance worker potentially exposed to COPCs in surface, shallow, subsurface I, and subsurface II soil are above the point of departure for risk management decisions of 1×10^{-6}, but well within the risk management range of 1×10^{-6} and 1×10^{-4}. For this receptor, risk estimates above *de minimis* levels were primarily attributed to dioxin TEQ in soil via the dermal contact and soil ingestion pathways and to hexavalent chromium in soil via the inhalation of particulates pathway (Table OCSxBCW-B2.3b).

As stated earlier, the area-weighted estimated cumulative ILCRs for the short- and long-term maintenance workers, depending on the depth interval, are approximately 1.2 to 2 times lower than the depth-weighted cumulative ILCRs. Therefore, assuming lifetime soil contact occurs randomly over the entire OCSxBCW, cumulative ILCRs for the long-term maintenance worker are slightly above 1×10^{-5} at all soil depths evaluated, when accounting for spatial bias in the EPCs. These values are well within the risk management range of 1×10^{-6} and 1×10^{-4}.

The area-weighted estimated cumulative HIs for the short- and long-term maintenance workers (Tables OCSxBCW-B2.4a and OCSxBCW-B2.4b, respectively) potentially exposed to COPCs in surface, shallow, subsurface I, and subsurface II soil are below an HI of 1. The area-weighted EPCs for lead in surface, shallow, subsurface I, and subsurface II soil are not expected to result in an increase in blood lead levels above the OEHHA benchmark value of 1 μg/dL in the fetus of a short- or long-term maintenance worker (Tables OCSxBCW-B2.5a and OCSxBCW-B2.5b).

Recreational Users

Baseline Area-Weighted Estimated Cumulative Incremental Lifetime Cancer Risk and Hazard Index					
Potential Receptor and Exposure Depth		OCSxBCW Potential Exposure Area			
		Cumulative ILCR	ILCR Drivers	HI	HI Drivers
Camper	Surface	**2E-06**	CrVI (2E-06) TEQ human (3E-07)	0.2	NA
	Shallow	**2E-06**	CrVI (1E-06) TEQ human (3E-07)	0.08	NA
Hiker	Surface	**5E-06**	CrVI (4E-06) TEQ human (6E-07)	0.5	NA
	Shallow	**3E-06**	CrVI (3E-06) TEQ human (6E-07)	0.2	NA
OHV Rider	Surface	**1E-05**	CrVI (9E-06) TEQ human (3E-07)	0.07	NA
	Shallow	**6E-06**	CrVI (6E-06) TEQ human (3E-07)	0.03	NA

Note:
ILCR and HI drivers are presented only for estimated cumulative ILCRs above 1×10^{-6} and estimated HIs above 1.

Assuming that lifetime soil contact occurs randomly over the entire OCSxBCW potential exposure area, the area-weighted estimated cumulative ILCRs for the camper, hiker, and OHV rider potentially exposed to COPCs in surface and shallow soil (Tables OCSxBCW-B2.3c through OCSxBCW-B2.3e) are above the point of departure for risk management decisions of 1×10^{-6}, but well within the risk management range of 1×10^{-6} and 1×10^{-4}. Risk estimates above *de minimis* levels were primarily attributed to hexavalent chromium and dioxin TEQ in soil via the soil ingestion pathway for the camper and hiker (Tables OCSxBCW-B2.3c and OCSxBCW-B2.3d) and to dioxin TEQ via the soil ingestion pathway and hexavalent chromium via the inhalation of particulates pathway for the OHV rider (Table OCSxBCW-B2.3e). As was the case for the depth-weighted risk estimates, elevated concentrations of hexavalent chromium at sample location AOC10-20 are driving the area-weighted EPCs for hexavalent chromium.

As demonstrated by comparing the values, the area-weighted estimated cumulative ILCRs for the camper, hiker, and OHV rider, are approximately 1.5 to 2 times lower than the depth-weighted estimated cumulative ILCRs, depending on the depth interval. Therefore, when accounting for spatial bias in the EPCs and assuming lifetime soil contact at the OCSxBCW potential exposure area, estimated cumulative ILCRs for the camper, hiker, and OHV rider are at or below 5×10^{-6} for all soil depths evaluated except for the OHV rider potentially exposed to COPCs in surface soil. The estimated cumulative ILCR for the OHV rider potentially exposed to COPCs in surface soil is 1×10^{-5}. These values are well within the risk management range of 1×10^{-6} and 1×10^{-4}.

The area-weighted estimated cumulative HIs for the camper, hiker, and OHV rider (Tables OCSxBCW-B2.4c through OCSxBCW-B2.4e) potentially exposed to COPCs in surface and shallow soil are below an HI of 1. The area-weighted EPCs for lead in surface and shallow soil are not expected to result in an increase in blood lead levels above the OEHHA benchmark value of 1 μg/dL for child recreational users (Tables OCSxBCW-B2.5c through OCSxBCW-B2.5h).

4.6.3 Uncertainties in the Risk Assessment

The risk assessment includes several uncertainties that warrant discussion. Many of the assumptions used in this risk assessment, regarding the representativeness of the sampling data, potential human exposures, fate and transport modeling, and chemical toxicity are conservative, follow agency guidance, and reflect a 90th or 95th percentile value rather than a typical or average value. The use of several conservative exposure assumptions and toxicity estimates can introduce considerable uncertainty into the risk assessment. By using conservative exposure assumptions or toxicity estimates, the assessment can develop a significant conservative bias that may result in the calculation of significantly higher estimates for cancer risks or noncancer hazards than are actually posed by the chemicals present in soil. These uncertainties are discussed in detail in Section 5.6 of the main report. Uncertainties applicable only to the risk assessment for the OCSxBCW potential exposure area are discussed below.

Additional uncertainties for the OCSxBCW potential exposure area include the use of the maximum depth-weighted soil concentration as the EPC. The maximum depth-weighted soil concentration was used for COPCs when the soil dataset contained fewer than four detected values (i.e., concentrations reported above the detection limit) or fewer than eight total observations as shown in Table OCSxBCW - 3.1.

APPENDIX OCSxBCW
SOIL HHERA FOR OUTSIDE THE COMPRESSOR STATION EXCLUDING BAT CAVE WASH EXPOSURE AREA

For the OCSxBCW potential exposure area, the maximum depth-weighted concentration was used as the EPC for the following COPCs:

- Surface soil: SVOCs (bis[2-ethylhexyl] phthalate, isophorone, and 4-methylphenol), pesticides (alpha-chlordane, gamma-chlordane, 4,4-dichlorodiphenyldichloroethylene, 4,4-dichlorodiphenyltrichloroethane, and dieldrin), and inorganic compounds (chloride, cyanide, and sulfate)
- Shallow soil: VOCs (bromomethane, chloroform, chloromethane, and methyl acetate), SVOCs (bis[2-ethylhexyl] phthalate, isophorone and 4-methylphenol), pesticides (alpha-chlordane, gamma-chlordane, 4,4-DDT, and dieldrin), and inorganics (chloride, cyanide, nitrate, phosphate, and sulfate)
- Subsurface I soil: VOCs (bromomethane, chloroform, chloromethane, and methyl acetate), SVOCs (bis[2-ethylhexyl] phthalate, isophorone and 4-methylphenol), pesticides (alpha-chlordane, gamma-chlordane, 4,4-DDT, and dieldrin) and inorganic compounds (chloride, cyanide, nitrate, phosphate, and sulfate)
- Subsurface II soil: VOCs (bromomethane, chloroform, chloromethane, and methyl acetate), SVOCs (bis[2-ethylhexyl] phthalate, butylbenzylphthalate, isophorone and 4-methylphenol), pesticides (alpha-chlordane, gamma-chlordane, 4,4-DDT, and dieldrin), and inorganic compounds (chloride, cyanide, nitrate, phosphate, and sulfate).

The use of the maximum depth-weighted soil concentration as the EPC for the COPCs listed above may not appropriately represent exposures and resulting risks/hazards. This approach to estimating EPCs does not materially impact the results of the HHRA because the OCSxBCW potential exposure area COPCs are not risk drivers at the site due to their low frequency of detection and/or fewer than eight observations.

5 ECOLOGICAL RISK ASSESSMENT

As stated in Section 1 and consistent with the RAWP documents (Arcadis 2008, 2009, 2015), an ecological risk assessment was not conducted for the OCSxBCW potential exposure area. For potential small home-range receptors, potential exposure to environmental media is evaluated as part of the individual AOC exposure areas that comprise the OCSxBCW potential exposure area. Exposure of potential large home-range receptors is evaluated as part of the BCW and AOC 4 potential exposure area (Appendix BCW+AOC4), the OCS potential exposure area (Appendix OCS), and the OCS excluding BCW and AOC 4 potential exposure area (Appendix OCSxBCW+AOC4).

6 SUMMARY AND CONCLUSIONS FOR THE HHRA

Potential cumulative cancer risks and noncancer hazards for potential human receptors were estimated, as presented above in Section 4. For potential ecological receptors, potential risks were not estimated, per the RAWP (Arcadis 2008). Uncertainties related to the HHRA at the site are discussed in detail in Section 5.6 of the main report, and uncertainties specific to the OCSxBCW potential exposure area are discussed herein. For the OCSxBCW potential exposure area, a HHRA was conducted per the RAWP documents (Arcadis 2008, 2009, 2015). One scenario (baseline, no scouring) was evaluated, and risks were estimated for various potential receptors using depth-weighted EPCs and area-weighted EPCs.

At the OCSxBCW potential exposure area, the COPCs identified for the HHRA include metals (antimony, hexavalent chromium, total chromium, copper, lead, mercury, thallium, and zinc), inorganic compounds (cyanide, nitrate, and phosphate), VOCs (bromomethane, chloro methane, chloroform, isophorone, and methyl acetate), SVOCs (4-methylphenol, bis [2-ethylhexyl] phthalate, and butylbenzylphthalate), PAHs, pesticides (4,4-dichlorodiphenyldichloroethylene, 4,4-dichlorodiphenyltrichloroethane, alpha-chlordane, dieldrin, and gamma-chlordane), PCBs, TPH as diesel, TPH as motor oil, and dioxins and furans. A summary of the results and conclusions regarding potential risk associated with exposure to these COPCs in soil at the OCSxBCW potential exposure area based on the risk/hazard estimates and uncertainties inherent in the risk assessment process are presented in this section. The conclusions reached after completing the OCSxBCW HHRA are presented below.

The estimated cumulative ILCRs and HIs associated with potential exposure to COPCs in soil at the OCSxBCW using depth- and area-weighted EPCs were estimated. Assuming lifetime soil contact occurs randomly over the entire OCSxBCW for the potential receptors evaluated, the estimated potential ILCR and HI results are summarized in the table and discussed below.

Baseline Scenario Estimated Cumulative Incremental Lifetime Cancer Risk and Hazard Index

Potential Receptor and Exposure Depth		OCSxBCW Potential Exposure Area			
		Cumulative ILCR		HI	
		Depth-Wt	Area-Wt	Depth-Wt	Area-Wt
Short-Term Maintenance Worker	Surface	**4×10^{-6}** (CrVI)	**2×10^{-6}** (CrVI)	≤1	≤1
	Shallow	**3×10^{-6}** (CrVI)	**2×10^{-6}** (CrVI)	≤1	≤1
	Subsurface I	**2×10^{-6}** (CrVI)	≤1×10^{-6}	≤1	≤1
	Subsurface II	≤1×10^{-6}	≤1×10^{-6}	≤1	≤1

APPENDIX OCSxBCW

Hunter	Surface	≤1 x 10^{-6}	---	≤1	---
	Shallow	≤1 x 10^{-6}	---	≤1	---
OHV Rider	Surface	**2×10^{-5}** (CrVI and dioxin TEQ)	**1×10^{-5}** (CrVI and dioxin TEQ)	≤1	≤1
	Shallow	**1×10^{-5}** (CrVI and dioxin TEQ)	**6×10^{-6}** (CrVI and dioxin TEQ)	≤1	≤1
Tribal User	Surface	≤1 x 10^{-6}	---	≤1	---
	Shallow	≤1 x 10^{-6}	---	≤1	---

Note:
-- = Area-weighted (area-wt) estimate not calculated because depth-weighted (depth-wt) estimates for the receptor were below *de minimis* levels.

Depth-Weighted

Potential exposures that are below or at *de minimis* levels include the following:

- **HI $\leq$ 1 for all soil depths** – All potential receptors evaluated including: Short-Term Maintenance Worker, Long-Term Maintenance Worker, Camper, Hiker, Hunter, OHV Rider, and Tribal User.
- **ILCR $\leq 1 \times 10^{-6}$** – Short-Term Maintenance Worker (subsurface II), Hunter (surface and shallow), and Tribal User (surface and shallow).

Potential exposures that are above *de minimis* levels of HI > 1 and/or within the risk management range of 1×10^{-6} and 1×10^{-4} include the following:

- **HI > 1 and $\leq$ 3** – None.
- **HI > 3** – None.
- **ILCR > 1×10^{-6} and $\leq 5 \times 10^{-6}$** – Short-Term Maintenance Worker (surface, shallow, and subsurface I) and Camper (surface and shallow).
- **ILCR > 5×10^{-6} and $\leq 1 \times 10^{-5}$** – Long-Term Maintenance Worker (subsurface I, and subsurface II), Hiker (surface and shallow), and OHV Rider (shallow).
- **ILCR > 1×10^{-5} and $\leq 1 \times 10^{-4}$** – Long-Term Maintenance Worker (surface and shallow) and OHV Rider (surface).

Potential exposures that are above the risk management range of 1×10^{-6} and 1×10^{-4} include the following:

- **ILCR > 1×10^{-4}** – None.

The depth-weighted estimated ILCRs and HIs for the hunter and tribal user were < 1×10^{-6} and < 1, respectively. Consequently, risks and hazards for these two potential receptors were not estimated using area-weighted EPCs. The depth-weighted estimated cumulative HI values were less than 1 for all potential receptors and all exposure depths evaluated. The depth-weighted estimated risks above *de minimis* levels for the short- and long-term maintenance workers, camper, hiker, and OHV rider were due to hexavalent chromium and/or dioxin TEQ. Therefore, potential risks and hazards for these potential receptors were estimated using area-weighted EPCs and are provided below.

Area-Weighted

Potential exposures that are below or at *de minimis* levels include the following:

- **HI $\leq$ 1 for all soil depths** – All potential receptors evaluated including: Short-Term Maintenance Worker, Long-Term Maintenance Worker, Camper, Hiker, and OHV Rider.
- **ILCR $\leq 1 \times 10^{-6}$** – Short-Term Maintenance Worker (subsurface I and subsurface II).

Potential exposures that are above *de minimis* levels of HI > 1 and/or within the risk management range of 1×10^{-6} and 1×10^{-4} include the following:

- **HI > 1 and $\leq$ 3** – None.
- **HI > 3** – None.
- **ILCR > 1×10^{-6} and $\leq 5 \times 10^{-6}$** – Short-Term Maintenance Worker (surface and shallow), Camper (surface and shallow), and Hiker (surface and shallow).

- **ILCR > 5 x 10^{-6} and ≤ 1 x 10^{-5}** – Long-Term Maintenance Worker (shallow, subsurface I and subsurface II) and OHV Rider (surface and shallow).
- **ILCR > 1 × 10^{-5} and ≤ 1 × 10^{-4}** – Long-Term Maintenance Worker (surface).

Potential exposures that are above the risk management range of 1 × 10^{-6} and 1 × 10^{-4} include the following:

- **ILCR > 1 × 10^{-4}** – None.

OVERALL SUMMARY

For the OCSxBCW potential exposure area, risk drivers for both depth- and area-weighted evaluations are hexavalent chromium and dioxin TEQ. Depth-weighted estimated risks and hazards for the hunter and tribal user are below 1 × 10^{-6} and 1, respectively; therefore, these receptors were not carried forward for the evaluation using area-weighted EPCs. The cumulative HIs estimated for all other potential receptors are below an HI of 1.

Assuming lifetime soil contact is limited to the OCSxBCW potential exposure area, the following summarizes the area-weighted HHRA results for the OCSxBCW potential exposure area. The estimated cumulative ILCRs associated with potential exposure to COPCs in soil using area-weighted EPCs for the short-term maintenance worker, camper, and hiker were above the point of departure for risk management decisions of 1 × 10^{-6} but at or below 5 x 10^{-6}. For the long-term maintenance worker and OHV rider, the area-weighted estimated cumulative ILCRs are above the point of departure for risk management decisions of 1 × 10^{-6} but at or below 1 x 10^{-5}, with one exception. The area-weighted estimated cumulative ILCR for the long-term maintenance worker (surface) is slightly above 1 x 10^{-5} (i.e., 2 x 10^{-5}). These values are well within the risk management range of 1 × 10^{-6} and 1 × 10^{-4}.

Furthermore, the depth- and area-weighted EPCs for lead in all soil at the OCSxBCW potential exposure area are not expected to result in an increase in blood lead levels above the OEHHA benchmark value of 1 µg/dL in the fetus of a short- or long-term maintenance worker, fetus of a hunter, or child recreational user.

For the OCSxBCW potential exposure area, the depth- and area-weighted risk estimates are not substantially different, with area-weighted estimated cumulative ILCRs being approximately 1.2 to 2 times lower than depth-weighted estimates for the same receptor and exposure depth. As shown in the table above, this difference reduced the risk category for the long-term maintenance worker (shallow), hiker (surface and shallow), and OHV rider (surface), but does not substantially change the overall outcome for the risk estimates for this exposure area. The hazards are not noticeably impacted since all the estimated cumulative HIs were less than 1 with both depth- and area-weighted evaluations.

The HHRAs conducted for the OCS potential exposure area (results summarized in Section 5.5.3.15 of the main report) and the OCSxBCW potential exposure area provide risk managers with perspective on how much of the risks/hazards estimated for the overall OCS potential exposure area are influenced by the elevated concentrations of hexavalent chromium and dioxin TEQ located within BCW. The estimated cumulative ILCRs are generally only 1 to 1.6 times lower for the OCSxBCW potential exposure area when compared to estimated cumulative ILCRs for the OCS potential exposure area.

APPENDIX OCSxBCW
SOIL HHERA FOR OUTSIDE THE COMPRESSOR STATION EXCLUDING BAT CAVE WASH EXPOSURE AREA

As indicated in Appendices OCS and Appendix BCWxSWMU1, the weight of evidence supports that the majority of excess risk is attributed to elevated concentrations of hexavalent chromium and/or dioxins located within solid waste management unit (SWMU) 1 and TCS-4 areas within BCW, and at location AOC10-20 in AOC 9.

Soil Human Health and Ecological Risk Assessment
PG&E Topock Compressor Station
Needles, California

Notes:

[a] Applicable to human health risk assessment (HHRA) only.

[b] Essential nutrient. No toxicity values are available for calcium, magnesium, potassium, and sodium, thus these chemicals are not evaluated in the HHRA. Human health toxicity values are available for iron and manganese, thus these chemicals are evaluated in the HHRA, if above background levels and have available toxicity values.

[c] No toxicity values are available for chloride and sulfate, thus these chemicals are not evaluated in the HHRA.

[d] Carcinogenic polycyclic aromatic hydrocarbons (CPAHs).

[e] Benzo(a)pyrene equivalent concentrations for CPAHs calculated for each sample using Potency Equivalency Factors (PEF) developed by United States Environmental Protection Agency (USEPA 2017) and recommended in Department of Toxic Substances Control (DTSC) guidance (2015).

[f] Polychlorinated biphenyls (PCBs) are evaluated as total PCBs in the risk assessment.

[g] Dioxins are evaluated in toxic equivalents.

Abbreviations:

B(a)P equivalent = Benzo(a)pyrene equivalent.
mg/kg = milligrams per kilogram.
ng/kg = nanograms per kilogram.
ug/kg = micrograms per kilogram.
COPC = Constituent of Potential Concern.
ND = Not detected.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:

[a] Applicable to human health risk assessment (HHRA) only.

[b] Essential nutrient. No toxicity values are available for calcium, magnesium, potassium, and sodium, thus these chemicals are not evaluated in the HHRA. Human health toxicity values are available for iron and manganese, thus these chemicals are evaluated in the HHRA, if above background levels and have available toxicity values.

[c] No toxicity values are available for chloride and sulfate, thus these chemicals are not evaluated in the HHRA.

[d] Carcinogenic polycyclic aromatic hydrocarbons (CPAHs).

[e] Benzo(a)pyrene equivalent concentrations for CPAHs calculated for each sample using Potency Equivalency Factors (PEF) developed by United States Environmental Protection Agency (USEPA 2017) and recommended in Department of Toxic Substances Control (DTSC) guidance (2015).

[f] Polychlorinated biphenyls (PCBs) are evaluated as total PCBs in the risk assessment.

[g] Dioxins are evaluated in toxic equivalents.

Abbreviations:

B(a)P equivalent = Benzo(a)pyrene equivalent.
mg/kg = milligrams per kilogram.
ng/kg = nanograms per kilogram.
ug/kg = micrograms per kilogram.
COPC = Constituent of Potential Concern.
ND = Not detected.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Notes:

[a] Applicable to human health risk assessment (HHRA) only.

[b] Essential nutrient. No toxicity values are available for calcium, magnesium, potassium, and sodium, thus these chemicals are not evaluated in the HHRA. Human health toxicity values are available for iron and manganese, thus these chemicals are evaluated in the HHRA, if above background levels and have available toxicity values.

[c] No toxicity values are available for chloride and sulfate, thus these chemicals are not evaluated in the HHRA.

[d] Carcinogenic polycyclic aromatic hydrocarbons (CPAHs).

[e] Benzo(a)pyrene equivalent concentrations for CPAHs calculated for each sample using Potency Equivalency Factors (PEF) developed by United States Environmental Protection Agency (USEPA 2017) and recommended in Department of Toxic Substances Control (DTSC) guidance (2015).

[f] Polychlorinated biphenyls (PCBs) are evaluated as total PCBs in the risk assessment.

[g] Dioxins are evaluated in toxic equivalents.

Abbreviations:

B(a)P equivalent = Benzo(a)pyrene equivalent.
mg/kg = milligrams per kilogram.
ng/kg = nanograms per kilogram.
ug/kg = micrograms per kilogram.
COPC = Constituent of Potential Concern.
ND = Not detected.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.

Toxaphene	0 / 166	ND	ug/kg	No	Not Detected
Polychlorinated Biphenyls					
Total PCBs [f]	154 / 430	17 - 6,280	ug/kg	Yes	Detected
Total Petroleum Hydrocarbons					
TPH as diesel	99 / 476	10 - 4,000	mg/kg	Yes	Detected
TPH as gasoline	0 / 294	ND	mg/kg	No	Not Detected
TPH as motor oil	244 / 474	10 - 8,900	mg/kg	Yes	Detected
Dioxins/Furans					
TEQ Human [g]	311 / 320	0.021 - 1,600	ng/kg	Yes	Above Background (HHRA Only)

Table OCSxBCW-2.1d
Chemicals Included in the Risk Assessment: OCS Excluding BCW Subsurface II Soil (0 to 10 feet bgs) for Baseline Scenario

Soil Human Health and Ecological Risk Assessment
PG&E Topock Compressor Station
Needles, California

Notes:

[a] Applicable to human health risk assessment (HHRA) only.

[b] Essential nutrient. No toxicity values are available for calcium, magnesium, potassium, and sodium, thus these chemicals are not evaluated in the HHRA. Human health toxicity values are available for iron and manganese, thus these chemicals are evaluated in the HHRA, if above background levels and have available toxicity values.

[c] No toxicity values are available for chloride and sulfate, thus these chemicals are not evaluated in the HHRA.

[d] Carcinogenic polycyclic aromatic hydrocarbons (CPAHs).

[e] Benzo(a)pyrene equivalent concentrations for CPAHs calculated for each sample using Potency Equivalency Factors (PEF) developed by United States Environmental Protection Agency (USEPA 2017) and recommended in Department of Toxic Substances Control (DTSC) guidance (2015).

[f] Polychlorinated biphenyls (PCBs) are evaluated as total PCBs in the risk assessment.

[g] Dioxins are evaluated in toxic equivalents.

Abbreviations:

B(a)P equivalent = Benzo(a)pyrene equivalent.
mg/kg = milligrams per kilogram.
ng/kg = nanograms per kilogram.
ug/kg = micrograms per kilogram.
COPC = Constituent of Potential Concern.
ND = Not detected.
TPH = Total Petroleum Hydrocarbons.
TEQ = Toxic Equivalent.
